

TOSHIBA

COLOR VIDEO CASSETTE RECORDER

V-703G/703T/703W

SPECIFICATIONS

GENERAL

Video recording system: Head configuration 2-head rotary, helical scan system
Video signal: CCIR 625 lines, 50 fields, PAL color signal
Storage temperature: -20° to +60°C (-4° to 140°F)
Operating temperature: 5° to 40°C (41° to 104°F)
Antenna: 75-ohms coaxial
Channel coverage: UHF channel 36 (31 - 39, adjustable)
AERIAL input/output: 75 ohm
Channel coverage:

	PAL B/G	
	V-703G/W	V-703T
VHF	E02 - E12 (02 - 12)	E02 - E12 (02 - 12) A - H, H1, H2, (13 - 20, 11, 12)
UHF	E21 - E69 (21 - 69)	
CATV	X - Z (74 - 76), S01 - S41 (01 - 41)	

Power requirement: AC 230V, 50Hz
Power consumption: 23W
Weight: 5.4kg (V-703G/T), 5.5 kg (V-703W)
Dimensions: 430 (W) X 97 (H) X 335 (D) mm

VIDEO

Input: VIDEO LINE IN: (SAT.) LINE IN 1 SCART socket (V-703G/T), AUDIO/VIDEO (SCART) socket (V-703W), 1.0 Vp-p, 75Ω, VIDEO Phono type jack (front), 1.0 Vp-p, 75Ω
Output: VIDEO LINE OUT: V-703G/T: (SAT.) LINE IN 1 SCART socket, 1.0 Vp-p, 75Ω, AUDIO/VIDEO OUT SCART socket, 1.0 Vp-p, 75Ω
V-703W: AUDIO/VIDEO (SCART) socket, 1.0Vp-p, 75Ω
Signal-to-noise ratio: More than 43 dB (SP mode)

AUDIO

Input: AUDIO LINE IN: (SAT.) LINE IN 1 SCART socket (V-703G/T), AUDIO/VIDEO (SCART) socket (V-703W), -5dBs more than 10 kΩ
AUDIO Phono type jacks (front), -5 dBs, more than 47 kΩs
Output: AUDIO LINE OUT: V-703G/T: (SAT.) LINE IN 1 SCART socket, -5 dBs, less than 1 kΩ
AUDIO/VIDEO OUT SCART socket, -5 dBs, less than 1 kΩ
V-703W: AUDIO/VIDEO (SCART) socket, -5dBs less than 1kΩ
Frequency response: 20Hz to 20kHz (Hi-Fi mode)
Signal-to-noise-ratio: More than 42 dB (SP mode)
Dynamic range: More than 90 dB (Hi-Fi mode)
Audio track: 1 track (Normal-mono), 2 channels (Hi-Fi sound)

TAPE TRANSPORT

Tape speed: SP: 23.39 mm/sec.
LP: 11.70 mm/sec.
Maximum recording-time: SP: 240 min. (with E-240)
LP: 480 min. (with E-240)
Winding time: Approx. 3 min. (E-180)

TIMER

Clock: 24 hour digital indication
No. of events: 8 over 1 year

Caution: Copyright Act 1956 Users of video recording equipment should note that it may be unlawful to record television broadcasts, cinematograph films or video recording without the permission of the relevant copyright owner.

Design and specifications are subject to change without notice.

SECTION 1 GENERAL DESCRIPTIONS

OPERATING INSTRUCTIONS (V-703T)

IDENTIFICATION OF CONTROLS

Front Panel

Rear Panel

VTR Display

IDENTIFICATION OF CONTROLS

Remote Controller

CONNECTION TO A SATELLITE RECEIVER

- 1 Connect the main antenna aerial to the **AERIAL INPUT** socket on the VTR.

- 2 Connect the **AERIAL OUTPUT** socket on the VTR to the TV using the supplied aerial cable.

- 3 Connect the satellite receiver and the VTR via the **(SAT.) LINE IN 1** socket on the VTR using an AV cable (not supplied).

- 4 Connect the **AUDIO/VIDEO OUT** (SCART) socket on the VTR to the audio/video (SCART) socket of the TV using an AV cable with SCART connectors (not supplied).

- 5 Connect the supplied power cable to the AC socket (**MAINS SUPPLY**) of the VTR.

To watch the playback signal when the VTR is connected in this way

Set the TV to the video input mode using the input select switch on the TV.

ADDITIONAL CONNECTIONS

Connection to a Stereo Amplifier

You can obtain a dynamic sound output when you play back a tape recorded in Hi-Fi stereo on this VTR. Connect the VTR to a stereo amplifier using an audio/video (SCART) cable.

Connection to Other VTR Using the LINE IN 2 Audio/Video Jacks (Phono Type)

- Connect another VTR or a camcorder to the LINE IN 2 audio/video jacks on the front panel of the VTR.
- When you want to watch or record a picture from another VTR connected to this VTR, press the **INPUT SELECT** button to set the VTR to the LINE 2 (L2) mode.
- If the connected equipment is monaural (has one audio output jack), connect to the L/MONO side of the AUDIO jacks on this VTR.

TUNING THE TV TO THE VIDEO CHANNEL

Important

The following adjustment is necessary when the VTR is connected to the TV via the AERIAL OUTPUT socket only.

The VTR converts the received signals into the type of output signals used in TV broadcasts, and sends them to your TV from the AERIAL OUTPUT socket. Your television must have a channel set aside exclusively for these VTR signals. This is called the video channel.

Setting a Video Channel on Your TV

- 1 Turn on the power of the TV.
- 2 Select the TV to a free station number which you wish to use for your video playback using the station selector on the TV.

Station selector on the TV

For example, select station 5 for the station number. This station 5 will be only used for watching a VTR picture.

- 3 Press the **ON/STANDBY** button to turn on the VTR.

Button on the front panel of the VTR

- 4 Press the **TV/VTR** button on the remote controller so that the VTR indicator appears in the VTR display.

- 5 Set the **TEST SIGNAL** switch at the back of the VTR to ON.

- 6 Tune the TV so that the TV station selected in step 2 (ex. station 5) tunes in to the video channel of the VTR. Tune the TV to around UHF channel 36 so that the clear two-striped test pattern display appears on the TV screen. (For tuning the TV, refer to the TV's Owner's Manual.)

- 7 Set the **TEST SIGNAL** switch to OFF.

Video channel setting is now complete.

The station number selected in step 2 (ex. station 5) can be used as the video channel of this VTR.

Accordingly, you must set the TV channel to station 5 when you use the VTR.

When the VTR is Connected to Your TV Using the Audio/Video (SCART) Socket

If you have made a VTR-TV connection using the audio/video (SCART) socket, you need not set the video channel.

To watch the playback picture when the VTR is connected in this way
Set the TV to the video input mode using the input select switch on the TV. For setting the video input mode, refer to the Owner's Manual of the TV you are using.

When a picture is not clearly visible because of interference on the selected video channel.

The test pattern signal is transmitted on channel 36 of the TV broadcasting channels. If you are encountering interference from another broadcast on the video channel, you may readjust to a free channel by using the RF converter CHANNEL control.

After having readjusted the RF converter CHANNEL control, follow steps 5 to 7 to re-tune the TV.

PRESETTING THE TV STATION ON THE VTR

Introduction

To watch and record TV programmes, it is necessary to preset the transmission channel numbers of the local TV stations on the position numbers in the VTR memory. This VTR can preset up to 48 positions for TV broadcasting stations.

Receivable channels

The receivable channels are shown in the table below. The channels are classified by the two tuning ranges on this VTR. Select the correct tuning range number in the VTR display. The transmission channels numbers in the parentheses are indicated in the VTR display.

Tuning range number	Band	Transmission channel number
1	VHF UHF CATV	E02 - E12 (02 - 12) A - H, H1, H2 (13 - 20, 11, 12) E21 - E69 (21 - 69) X - Z (74 - 76)
2	CATV	S01 - S41 (01 - 41)

VTR display

Preparation

Select the video channel on the TV or set the TV's input mode selector to the video input mode depending on the TV connection method.

Example: to preset a UHF station with transmission channel number 26 to position number 1.

- 1 Press the **ON/STANDBY** button to turn the VTR on.

- 2 Press the **TV/VTR** button so that the VTR indicator appears in the VTR display.

- 3 If the "L1" or "L2" indicator appears in the VTR display, press the **INPUT SELECT** button so that a position number appears.

- 4 Press the **PRESET** button.
The VTR enters the presetting mode.
The VTR display indicates the tuning range number, the transmission channel number of a TV station and position number.

- 5 Press the **CHANNEL** (▲/▼) button to select the position number on which you want to preset a TV station. Select position number 1 for this example.

- 6** Press the **NORM** button to select a tuning range number.
Each time you press the button, the number alternates between 1 and 2. Select the tuning range number 1 for this example.

- 7** Press the **SEARCH** (-/+) buttons to search for a TV station you want to preset.
Search for transmission channel number 26 for this example.

- If the received TV station signal is tuned in, searching stops automatically. Press the **SEARCH** (-/+) buttons to restart channel search operation.

- 8** If a clear picture does not appear on the TV screen after searching is finished, make fine adjustment with the **FINE** (-/+) buttons.

- 9** Repeat steps 5 to 8 for other TV stations.

- 10** Press the **PRESET** button.
Channel presetting is now complete.

The VTR display returns to the previous mode.

Skipping Channels

You can skip unnecessary position numbers when you select the TV stations with the **CHANNEL** (▲/▼) buttons.

- 1) Press the **PRESET** button.
The VTR enters the presetting mode.

- 2) Select the position number you want to skip with the **CHANNEL** (▲/▼) buttons.

Example: to skip position number 5.

- 3) Press the **SKIP** button.
The following indication will appear in the VTR display with the skip function on or off.

Channel skip off

43 CH

5 P

Channel skip on

-- CH

5 P

If you press the **SKIP** button again, the transmission channel number will appear and the skip function will be cancelled.

- 4) Press the **PRESET** button.
Channel skipping is now engaged.

To cancel channel skipping

Follow steps 1) to 4) above.

Note

You can switch the skip function on/off only when the TV stations have been preset. It is not possible during auto search.

SETTING THE CLOCK

Introduction

When the VTR is first connected to the AC socket, or after a power failure of more than approximate 30 minutes, 0:00 blinks in the VTR display and it is necessary to set the clock. You can set the clock using the TV screen.

Preparation

Select the video channel on the TV or set the TV's input mode selector to the video input mode depending on the TV connection method.

Hints on setting

The item to be set will blink. Set the data with the number buttons, following the blinking position. You can change the blinking position by pressing the SHIFT (←/→) buttons.

Clock Setting Procedure

Example: to set the clock to 15:30 on July 5, 1993.

- 1 Press the **ON/STANDBY** button to turn the VTR on.

- 2 Press the **OSP** button. The MENU/SETUP screen will appear on the TV screen.

- 3 Press **number button 1** to select the CLOCK SET screen.

- 4 Set the hours and minutes. Press **number buttons 1, 5, 3 and 0**.

Correcting a mistake:

Press the **SHIFT (←)** button repeatedly until the number you set incorrectly blinks. Press the correct number button and then press the **SHIFT (→)** button to return to the previous digit.

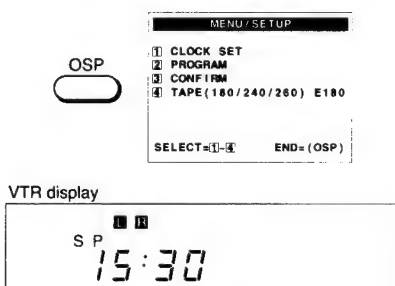

- 5 Set the day and month. Press **number buttons 0, 5, 0 and 7**.

- 6** Set the year.
Press **number buttons 9 and 3** (last two digits of the year).

- 7** Press the **OSP** button.
Now the clock starts.

- 8** Press the **OSP** button to return to the normal TV screen.

Notes

- It is not possible to set the clock in the timer recording or the timer standby mode.
- If you input irregular clock data such as February 29, 1993, it will not be accepted.
- The built-in calendar of the VTR is valid from 1990 to 2089.

Resetting the VTR Clock

If a power failure of short duration has occurred, the colon between the hour and minutes digits in the VTR display blinks.

The time displayed may be incorrect.

In this case, the VTR clock needs to be reset. Follow the "Clock Setting Procedure".

STEREO/BILINGUAL TV PROGRAMMES AND SOUND OUTPUT

STEREO/BILINGUAL TV programmes

This VTR receives STEREO TV programmes and BILINGUAL TV programmes. The STEREO and BILINGUAL TV programmes will be recorded on Hi-Fi sound track.

VTR display

Indicators Lit in the VTR Display When a STEREO/BILINGUAL TV Programme is Received

When a STEREO or BILINGUAL TV programme is received, the STEREO or BILINGUAL indicator lights as shown in the table below.

	VTR display
STEREO TV programme received	STEREO indicator lit
BILINGUAL TV programme received	BILINGUAL indicator lit
Normal TV programme received	not lit

Monitoring Sound Output

When monitoring a TV programme or playing back a Hi-Fi recorded video tape, press the **AUDIO SELECT** button to select a desired sound output. Following is a list of monitoring cases when the VTR is connected to a stereo system or stereo TV. As the **AUDIO SELECT** button is pressed, the sound output and the indicator change as below:

Sound type	STEREO programmes	BILINGUAL programmes	Normal TV programmes
VTR display			
	Heard in stereo. (left channel and right channel)	Channel 1 (MAIN) heard from the left speaker, Channel 2 (SUB) from the right speaker.	Heard in monaural.
	Left channel heard from both the left and right speakers.	Channel 1 (MAIN) heard from both the left and right speakers.	Heard in monaural.
	Right channel heard from both the left and right speakers.	Channel 2 (SUB) heard from both the left and right speakers.	Heard in monaural.
	Both L and R go off.	Channel 1 (MAIN) heard from both the left and right speakers.	Heard in monaural.

Sounds of a recorded TV programme

This VTR is capable of recording sound in Hi-Fi mode. Accordingly, STEREO TV programmes and BILINGUAL TV programmes are recorded in its original sound system. (See the above list.)

Notes

- When listening to a STEREO TV programme or playing back a tape Hi-Fi recorded in stereo, you have to connect the VTR with the stereo audio system or the stereo TV. The sound which is output from the AERIAL OUTPUT socket is monaural.
- If a cassette which is not Hi-Fi recorded is played back, [L] and [R] indicators go off automatically and the sound output is monaural.

RECORDING A PROGRAMME FROM A CONNECTED SATELLITE RECEIVER

Introduction

If you are using a satellite receiver, you can connect it to this VTR to record a satellite programme.

Preparation

Select the video channel on the TV or set the TV's input selector to the video input mode depending on the TV connection method.

1 Turn on the connected satellite receiver.

2 Load a cassette with the safety tab attached or press the **ON/STANDBY** button if a cassette is loaded.

3 Press the **TV/VTR** button so that the VTR indicator will appear in the VTR display.

4 Press the **INPUT SELECT** button so that "L1" will appear in the position number area.

Each time you press the **INPUT SELECT** button, the display changes as shown below.

5 Choose the satellite programme you want to record using the station selector on the connected satellite receiver.

Make sure that selected programme is on the TV screen.

6 Press the **SP/LP** button to select the recording tape speed: SP (standard play) or LP (long play).

7 Press the **REC** button on the VTR, or simultaneously press the two **REC** buttons on the remote controller. Recording begins.

Recording indicator

Linear time counter

8 Press the **STOP** button when recording is finished.

■ Monitoring a satellite programme while recording a TV programme (Satellite Monitor Function)

- 1) Follow steps 1 to 5 of "RECORDING A TV PROGRAMME" and record a TV programme.

- 2) Press the **SAT. MONITOR** button. The SAT. MONI. indicator appears.

Each time you press the **SAT. MONITOR** button, the SAT. MONI. indicator goes on and off alternately.

- 3) Choose the satellite programme you want to watch using the station selector on the connected satellite receiver.

Notes on the satellite monitor function

- When you operate the satellite monitor, make sure that the TV is connected to the VTR using the AUDIO/VIDEO (SCART) socket and set the TV's input selector to the video input mode.
- The satellite monitor function is also available in the timer recording standby mode, in the timer recording mode or the one-touch timer recording mode.
- The satellite monitor function is deactivated in the following cases:
 - 1) When recording has been stopped.
 - 2) When recording has been paused.
 - 3) When OSP mode (ex. the MENU/SETUP screen is displayed) is set.

■ Monitoring a TV programme while recording a satellite programme

- 1) Follow steps 1 to 7 of "RECORDING A PROGRAMME FROM A CONNECTED SATELLITE RECEIVER", and record a satellite programme.

- 2) Press the **TV/VTR** button so that the VTR indicator disappears in the VTR display.

- 3) Choose a TV programme you want to watch while recording a satellite programme, using the station selector on the TV.

■ Watching a satellite programme while the VTR is in the standby (power off) mode

- 1) Press the **SAT. MONITOR** button so that the SAT. MONI. indicator appears in the VTR display.
- 2) Choose a satellite programme you want to watch using the station selector on the connected satellite receiver.

Notes

- If you turn on the VTR while watching a satellite programme in the standby mode, the picture disappears from the TV screen.
- Keep the power cable of the VTR connected to a wall AC outlet.

ONE-TOUCH TIMER RECORDING (OTR)

Introduction

Using the OTR (One-touch Timer Recording) function, you can start recording immediately and stop recording and turn the VTR off at a desired time within 8 hours in 30-minute increments.

Preparation

- Confirm that the clock time is correct.
- Load a cassette with the safety tab attached.
(Press the ON/STANDBY button if the power is off with a cassette loaded.)

Example: to record a programme of a station preset on position 3 in the SP mode from now (15:00) until 16:00.

- 1 Select the position number on which the desired TV station is preset using the **CHANNEL** (▲/▼) buttons or **number buttons**.

- When you want to record sources from the connected satellite receiver or other VTRs using the OTR function, press the **INPUT SELECT** button to set the LINE input mode.

- 2 Press the **SP/LP** button to select the SP mode.

- 3 Press the **OTR** button.
The VTR enters the OTR mode and adds 30 minutes.

- 4 Within 10 seconds, press the **OTR** button to set the recording stop time.
Each time you press the **OTR** button, the recording stop time changes in 30-minute increments.

- 5 Within 10 seconds, press the two **TIMER** buttons simultaneously.
One-touch timer recording begins.

VTR display

■ **To set One-Touch Timer Recording during recording**

Even when you are recording a TV programme or a programme source from equipment connected to this VTR, you can perform one-touch timer recording. In this case, follow the operating procedure from step 3.

To cancel the one-touch timer recording in progress

Press the two **TIMER** buttons simultaneously (not the **STOP** button).

Notes

- In the OTR mode, the VTR automatically switches off at the recording stop time. If timer programme recording also has been preset, the VTR automatically enters the timer standby mode at the recording stop time.
- In the case where a programmed timer recording is set to start before a one-touch timer recording ends, the one-touch timer recording has priority and will continue (i.e., the programmed timer recording will not start.).

PROGRAMMABLE TIMER RECORDING

Introduction

The programmable timer allows you to record up to 8 different programmes over one year. This function is convenient when you are away from home or when you are busy.

Hints on setting

The item to be set blinks. Set the data with the number buttons, following the blinking position. You can change the blinking position by pressing the SHIFT (←/→) buttons.

Preparation

- Select the video channel on the TV or set the TV's input selector to the video input mode depending on the TV connection method.
- Confirm that the clock time is correct.

AUTO SPEED ADJUST

If the tape length is not long enough for timer recording in the SP mode, the VTR automatically changes the tape speed to the LP mode.

Setting the Timer Programme

Example: to record a programme of the station with transmission channel number 26 preset on position number 1 in the SP mode from 20:30 until 21:30 on July 8. Today is July 5.

- 1 Load a cassette with the safety tab attached or press the **ON/STANDBY** button if a cassette is loaded.

- 2 Press the **OSP** button. The MENU/SETUP screen appears on the TV screen.

- 3 Press **number button 2**. The PROGRAM screen appears on the TV screen.

- 4 Select programme number 1. Press **number button 1**.

- 5 Select position number 1. Press **number button 0 and 1**.

You can make a timer recording of a source programme from other equipment connected to this VTR using the **INPUT SELECT** button.

- LINE 1 (SAT.) : to record from a connected satellite receiver.
- LINE 2 : to record from other equipment connected to the AUDIO/VIDEO jacks (phono type) on the front panel of this VTR.

Correcting a mistake:

Press the SHIFT (←) button to reverse the blinking position until the number you set incorrectly blinks. Correct the number with the number buttons and press the SHIFT (→) button to return the blinking digit.

- 6** Press **number button 1** to select the tape speed SP.

- SP : Select for a recording with better picture and sound.
- LP : Select for doubling recording time, but with less picture quality and sound than using the SP mode.
- AUTO : Select when you use the AUTO SPEED ADJUST.
(See "AUTO SPEED ADJUST" on the right column of this page.)

- 7** To set the hours and minutes of the recording start time (TIME ON), press **number button 2, 0, 3 and 0**.

- 8** To set the hours and minutes of recording end time (TIME OFF), press **number button 2, 1, 3 and 0**.

- 9** To select a ONCE programme, press **number button 1**. You can also set daily and weekly timer recordings.

- 10** To set the recording date (month and day), press **number buttons 0, 8, 0 and 7**.

- 11** Press the **OSP** button. Programme setting is complete.

When you set the timer recording for other programmes, follow steps 3 to 11. (For this example, since programme number 1 is already used, preset another programme using programme numbers 2, 3 . . . 8 in step 4.)

- 12** Press the two **TIMER** buttons simultaneously.

The power will be turned off and the VTR enter the timer standby mode.

VTR display

AUTO SPEED ADJUST

If the tape length is not long enough for timer recording in the SP mode, set the recording speed to AUTO at step 6.

Recording starts in the SP mode and the VTR automatically selects the tape speed to record the programme to the end. If the tape length is not long enough, the tape speed automatically changes from the SP mode to the LP mode.

Notes

- Make sure to select TAPE 180, 240 or 260 from MENU/SETUP screen according to the tape used.

Each time you press **number button 4**, the display changes to E180, E240 and E260.

E180: when using an E-180 tape or shorter.

E240: when using an E-210 or E-240 tape.

E260: when using an E-260 tape.

- When the LP mode is selected and the tape length is not sufficient to record the programme to the end, the programme cannot be completely recorded.
- The image will be distorted when playing back the part where the recording mode was switched from the SP mode to the LP mode with the AUTO SPEED ADJUST method.

PROGRAMMABLE TIMER RECORDING

Daily and Weekly Timer Recording

Daily timer recording

You can record TV programmes on the same TV station at the same hour Monday through Friday.

- 1) In step 9, press **number button 2** to select DAILY.

2

- 2) Skip step 10.
- 3) Perform steps 11 and 12.

Weekly timer recording

You can record TV programmes on the same TV station on the same day every week.

- 1) In step 9, press **number button 3** to select WEEKLY.

TV screen

PROGRAM	
(PGM NO.)	1
(CH P.)	1
(SPEED)	SP
(TIME ON)	20:30

- 3) Press the **OSP** button again when you finish confirming.

To confirm during the timer recording or the timer standby mode (**TIMER** indicator lit)

Press the **OSP** button so that the "CONFIRM" screen display appears on the TV screen. After about one minute, the screen display disappears.

Changing the Timer Programmes

Preparation

If the VTR is set to the timer standby mode (**TIMER** indicator lit), press the **TIMER** buttons to release it and press the **ON/STANDBY** button.

- 1) Press the **OSP** button to display the MENU/SETUP screen.
- 2) Perform steps 3 to 11 of "Setting the Timer Programme", to correct timer programme data.
 - In step 4, select a programme number which you want to correct.
- 3) Press the **TIMER** buttons simultaneously to return the VTR to the timer standby mode.

Cancelling the Timer Programmes

Preparation

If the VTR is set to the timer standby mode (**TIMER** indicator lit), press the **TIMER** buttons to release it and press the **ON/STANDBY** button.

- 1 Press the **OSP** button to display the MENU/SETUP screen.
- 2 Press **number button 3** to select CONFIRM.

- 3 Select a programme number which you want to cancel. The selected programme data are cleared.

- 4 Press the **OSP** button again.
- 5 If necessary, press the **TIMER** buttons to return to the timer standby mode.

Recording or Playback in the Timer Standby Mode

When you want to use the VTR while it is set to the timer standby mode, proceed as follows:

- 1 Press the **TIMER** buttons simultaneously. **TIMER** indicator goes off.

- 2 Press the **ON/STANDBY** button to turn on the VTR and operate the VTR as usual.
- 3 After operating the VTR, press the **TIMER** buttons again. The VTR returns to the timer standby mode.

Note

Finish normal use of the VTR before the preset recording start time, since the timer only works when the VTR is in the timer standby mode.

Additional Information on Timer Recording

Error Indicator

The "E" (error) indicator appears in the VTR display if you press the **TIMER** buttons when:

- a cassette is not loaded.
- a cassette without a safety tab is loaded.
- a cassette with a safety tab is loaded and no timer programmes are set on the VTR.

In these cases, a recording will not be made.

Overlap of the programmes

If two timer programmes overlap, the recording ON time of programme 2 has priority over the recording OFF time of programme 1.

Example: when programme 2 overlaps programme 1

If a power failure occurs during timer recording

- After a power failure of short duration, the colon between the hour and minute digits blinks in the VTR display. This indicates that the timer programmes are still in the memory of the VTR.
- After a power failure of long duration (longer than approximate 30 minutes), 0:00 blinks in the VTR display. This indicates that the timer programmes have been cleared. Reset the clock and timer programmes on the VTR.

COUNTER FUNCTION

Introduction

You can see the clock, linear tape counter or tape time remaining on the VTR display.

The **REMAIN/CLOCK** button switches the display.

VTR display

COUNTER
RESET
REMAIN/
CLOCK

Changing the Counter Display

Each time you press the **REMAIN/CLOCK** button, the display changes in sequence as follows:

Clock		REMAIN/ CLOCK
Linear time counter		REMAIN/ CLOCK
Tape time remaining		REMAIN/ CLOCK
Clock	Clock	

To reset the linear time counter to 0H00M00S

The counter is automatically reset to 0H00M00S when a cassette is ejected. If you want to reset the counter at some other point, for example, when you start a new recording, just press the **COUNTER RESET** button.

Notes

- The linear timer counter does not work on non-recorded portions of the tape and the counter display flashes.
- When the tape is ejected or the VTR is turned off, the linear time counter changes to clock display.
- If the tape rewinds back over 0H00M00S, "—" appears in the VTR display.

Tape Time Remaining

- Turn on the VTR and load a cassette.
- Press the **OSP** button.
The MENU/SETUP screen will appear on the TV screen.

- Press **number button 4** and select a tape length, TAPE 180, 240, 260 depending on the tape to be used.

Each time you press **number button 4**, the tape length changes.

- E180: when using an E-180 tape or shorter.
- E240: when using an E-210 or E-240 tape.
- E260: when using an E-260 tape.

- Press the **REMAIN/CLOCK** button.
The tape time remaining is displayed. (See the chart on the left column.)

Notes

- The displayed time remaining is an approximate time.
- The time remaining is calculated according to the tape speed (SP or LP mode) and the cassette type.
- In the case where the time remaining is below 5 minutes, the tape time remaining display blinks.

SECTION 2

ADJUSTMENT PROCEDURES

1. MECHANICAL ADJUSTMENT

1-1. Mechanical Parts Location

1-1-1. Mechanism Deck Parts Location

Top View

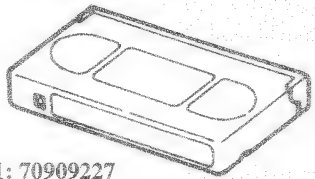

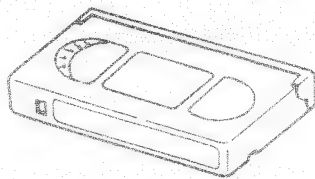

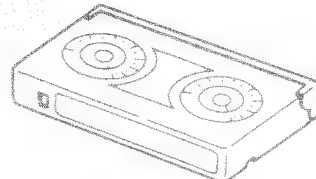

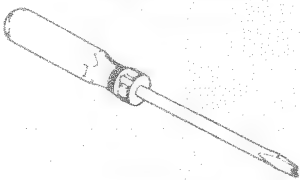

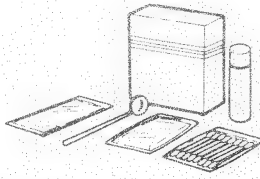

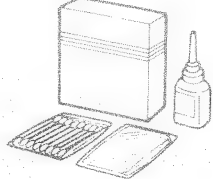

Bottom View

1-1-2. Front Loading Mechanism

1-2. Servicing Jig List

<p>Alignment tape</p>  <p>ST-C1: 70909227 ST-C3: 70909264</p>	<p>Back tension cassette gauge</p>  <p>70909103</p>	<p>Torque cassette gauge (KT-300NR)</p>  <p>70909199</p>

<p>Grease</p> 		

1-3. Main Parts Servicing Time

- Part replacement time differs from servicing life time of each part.
- Following table is prepared based on a standard condition (room temperature, room humidity). The replacement time will be varied depending upon operation environment, using methods, operation duty, etc.
- Particularly, life of the upper cylinder depends upon operation conditions.

	Part Name	Servicing Time (Operating Hours)										Note
		500	1000	1500	2000	2500	3000	3500	4000	4500	5000	
Tape Transport System	Tension pole											• When cleaning, use a swab or a piece of gauze soaked in alcohol.
	S/T-slant guide post											
	Impedance roller*											
	No. 8 guide post	Δ	Δ	Δ	Δ	Δ	Δ	Δ	Δ	Δ	Δ	• After cleaning, cleaned parts are dried completely, and then load a video cassette.
	Capstan											
	OSC guide post											
	No. 0 guide post											• When lubricating, always use the specified oil.
	No. 10 guide post											
	S/T-guide roller	Δ	Δ	Δ	○	○	○	○	○	○	○	
	Upper cylinder	Δ	○	○	○	○	○	○	○	○	○	• When lubricating, apply one or two drops of oil after the cleaning with alcohol.
	FE head	Δ	Δ	Δ	○	○	○	○	○	○	○	
	ACE head	Δ	○	○	○	○	○	○	○	○	○	
	Pinch roller	Δ	○	○	○	○	○	○	○	○	○	• Check the back tension.

	Supply reel table				▲				▲		○	
	Take-up reel table				▲				▲		○	
	Idle gear assembly	Δ	○	○	○	○	○	○	○	○	○	
Others	Band brake assembly		○	○	○	○	○	○	○	○	○	

Δ : Cleaning ▲ : Lubrication ○ : Check and replace if necessary

* There are two types. One type has an impedance roller and another type has no impedance roller.

1-4. Main Parts Replacement

1-4-1. Front Loading Assembly Replacement

(1) Front loading assembly replacement

1. Make sure that there is no cassette in the VTR.
2. Remove the top cover and the front panel.
3. Remove two screws (1).
4. Move the front loading assembly in the direction shown by the arrow (A) and remove it from the mechanism deck.
5. When remounting, use the above steps in reverse order.

Note:

- When removing the front loading assembly in the PLAY and/or REVIEW position(s) (the pinch roller is pressed to the capstan), push the tension pole to the cylinder direction and remove the front loading assembly.
- Before reinstalling the front loading assembly, check by pressing the worm gear in the direction of the arrow (B) that the worm gear does not engage the worm wheel (C).
- Before securing two screws, check that the F/L worm wheel engages without biting the tip of the worm gear.

Fig. 4-1-1 Front loading assembly replacement

Fig. 4-1-2 Top bracket securing screw replacement

(2) Top bracket securing screw replacement

1. Remove the top bracket securing screw from the front loading assembly.
2. Remount a new top bracket securing screw on the front loading assembly.

(3) Arm gear R replacement

1. Move three claws (1) in the direction of the arrow and remove the arm gear R. (Refer to Fig. 4-1-4.)
2. Remove the spring R attaching to the arm gear R.
3. Replace the arm gear in the reverse order of removal. Take care not to mount the spring R on the opposite side.

Note:

- Align the cutout on the drive gear R and the ◀ mark on the arm gear R.
- Pay attention to positions of the boss (A) and the spring R. (Refer to Fig. 4-1-4.)
- When attaching the spring R, confirm that it is in a right position.
- Confirm that Boss (E) of the Fig 4-1-15 view (C) goes into groove (B).

Fig. 4-1-3 Arm gear R replacement

Fig. 4-1-4

(4) Door lever replacement

1. To remove the top bracket, remove the top bracket securing screws, push the claws (E) and (F), remove the top bracket upward and slide it in the direction of the arrow (H).
2. Push the claws of the side bracket L, (A), (B), (C) and (D), and remove (A)', (B)', (C)' and (D)' of the back-up plate side.
3. Replace the door lever according to the removing procedures in the reverse order.

Fig. 4-1-5 Door lever replacement

Note:

- Take care that the end of the door lever (M) is put in the (P) between the walls, (L) and (K), of the arm gear L. (Refer to Fig. 4-1-6.)
- Take care that the end of the door lever (N) is positioned over the holder guide. (Refer to Fig. 4-1-6.)
- When mounting the back-up plate side, take care that its (J) section is positioned over the front loading assembly. (Refer to Fig. 4-1-6, Fig. 4-1-7.)

Fig. 4-1-6

Fig. 4-1-7

(5) Arm gear L replacement

1. Remove the top bracket, back-up plate side and the door lever according to the door lever replacement procedure. (Refer to item "(4) Door lever replacement".)
2. Turn the arm gear L in the direction of the arrow (A) (to move the (D) section from the drive gear L) and remove it in the direction of the arrow (B).
3. Apply grease to the tip of the post (2) at the bracket side L (hatching portion).
4. Replace the arm gear L in the reverse order of removal.

Fig. 4-1-8 Arm gear L replacement

Note:

- Align the (C) part of the drive gear L and the ▼ mark of the arm gear L shown by (C)'.
- Align the ▼ mark of the F/L cam gear and the tip of the upper gear of the arm gear L shown by (E).
- Make sure that the boss (1) and the spring are positioned as shown in Fig. 4-1-9.

Fig. 4-1-9

(6) Relay gear replacement

1. Remove the top bracket and the back-up plate side. (Refer to item “(4)1., 2. Door lever replacement”.)
2. Remove the relay gear in the direction of the arrow and apply grease to the tip of the relay gear post.
3. Reinstall a new relay gear in the reverse order of removal.

Fig. 4-1-10 Relay gear replacement

(7) F/L cam gear replacement

1. Remove the top bracket and the back-up plate side. (Refer to item “(4) 1., 2. Door lever replacement”.)
2. Remove the relay gear and then remove the F/L cam gear.
3. Apply grease to the relay gear post at the bracket side L and the tip of the F/L cam gear post.
4. Replace the F/L cam gear and apply grease to the outer surface of the gear of the F/L cam gear.
5. Reinstall the F/L cam gear by reversing above procedures.

Fig. 4-1-11 F/L Cam gear replacement

Fig. 4-1-12 Phase matching

Note:

- Align the ▼ mark on the F/L cam gear and the tip of the gear tooth (thicker) of the arm gear L. (Refer to Fig. 4-1-12.)

(8) F/L worm wheel replacement

1. Remove the top bracket and the back-up plate side. (Refer to item “(4)1., 2. Door lever replacement”.)
2. Remove the relay gear and then remove the F/L worm wheel.
3. Apply grease to the tip of the worm wheel post.
4. Reinstall a new F/L worm wheel using the previous steps in reverse order.

Fig. 4-1-13 F/L worm wheel replacement

(9) Door lock lever replacement

1. Make the cassette holder assembly slid to an about 30 mm inner side.
2. Push two claws (A)' of the front loading assembly in the direction of the arrow and remove the holder guide upward.
3. Remove the arm gear R. (Refer to item “(3) Arm gear R replacement”.)
4. Remove the door lock spring from the hook (D) of the front loading assembly. (Refer to Fig. 4-1-15.)
5. Remove the door lock lever from the drive shaft (F/L) and remove the door lock spring from the door lock lever.
6. Mount a new door lock lever in the reverse order of removal.

Fig. 4-1-14 Door lock lever replacement

Fig. 4-1-15 View (C)

Note:

- Take care not to give permanent deformation to the door lock spring.
- In installing the holder guide, insert the tip of the door lock lever (B) into the hole (B)' on the holder guide.
- Confirm that boss (E) goes into groove (B) of Fig. 4-1-4.

(10) Door lock spring replacement

1. Remove the holder guide and the door lock lever. (Refer to item “(9) Door lock lever replacement”).
2. Remove the door lock spring from the door lock lever.
3. Mount a new door lock spring in the reverse order of removal.

(11) Drive shaft (F/L) assembly replacement

1. Remove the arm gear R according to the replacement procedure for the arm gear R. (Refer to item “(3) Arm gear R replacement”).
2. Remove the holder guide and the door lock lever. (Refer to item “(9) Door Lock Lever Replacement”).
3. Remove the top bracket. (Refer to item “(4) Door lever replacement 1.”).

Fig. 4-1-16 Drive shaft (F/L) assembly replacement

4. Remove the bracket side assembly R and the bracket side assembly L from the cassette holder assembly.
5. Remove the back-up plate side from the bracket side assembly L. (Refer to item "(4) Door lever replacement 2.").
6. Remove the door lever and then arm gear L from the bracket side assembly L. (Refer to item "(4) Door lever replacement" and "(5) Arm gear L replacement".)
7. Remove the drive shaft (F/L) assembly from the bracket side assembly L in the direction of the arrow (C). (This can be removed by bending the wall (D) in the direction (A).) (Refer to Fig. 4-1-17.)
8. After replacing the drive shaft (F/L) assembly, apply grease to the outer surface of the gear.

Fig. 4-1-17

9. Install the drive shaft (F/L) assembly according to the reverse procedure.
10. Make sure that it is operating normally.

Note:

- When mounting the bracket side assembly L on the cassette holder assembly, let bosses (E), (F) and (G) of the cassette holder through the grooves on the bracket side assembly L, (E)', (F)' and (G)' respectively. Also pass the boss (E) between the groove (E)" on the arm gear L and spring (2) (upper side). (Refer to Fig. 4-1-18.)
- When mounting the bracket side assembly R on the cassette holder assembly, pass bosses (H), (I), (J) and (K) through the grooves on the bracket side assembly R, (H)', (I)', (J)' and (K)' respectively. (Refer to Fig. 4-1-19.)

Fig. 4-1-18

Fig. 4-1-19

1-4-2. Cylinder Replacement

(1) Upper cylinder assembly

<Inspection>

1. Check if the video heads are damaged or worn out.
2. Check the video heads for clogging. (Replace the upper cylinder assembly if the clogging is not remedied after cleaning).

<Replacement>

1. Remove two screws (2) and remove the upper cylinder assembly.
2. Clean the new cylinder assembly (3) and the flange (5) mounting surface with a cleaning kit.
3. Align the head (A) (P.C. board's color : green) and the marker on the rotary transformer P.C. board (4) and then mount the upper cylinder assembly (Tightening torque: 3 – 4kg.cm).

Note:

Take care not to touch the connector assembly or not to give deformation to the spring.

4. Perform the tape transport adjustment.

Fig. 4-2-1 Upper cylinder replacement

Fig. 4-2-2

Fig. 4-2-3

(2) Cylinder motor

<Inspection>

1. Independently apply power to the cylinder motor.
2. If the motor does not turn, replace the rotor and the stator.

<Rotor replacement>

1. Remove the mechanism P.C. board securing screw to remove the mechanism P.C. board.
2. Remove the ground brush securing screw to remove the ground brush.
3. Remove the ground cap.
4. Remove two rotor screws (1) and replace the rotor (3) (Tightening torque: 3 – 4 kg.cm).

Fig. 4-2-4 Cylinder motor replacement

Note:

When assembling a new rotor, align the two phase matching holes to fit the rotor and the pressurized boss (4) (Fig. 4-2-5).

Fig. 4-2-5 Phase matching of rotor pressurized boss

<Stator replacement>

1. Remove the mechanism P.C. board securing screw to remove the mechanism P.C. board.
2. Remove the ground brush securing screw to remove the ground brush.
3. Remove the ground cap.
4. Remove two rotor securing screws (1) and remove the rotor (3). (Fig. 4-1-4.)
5. Remove the stator securing screws (5).
6. Replace the stator (6) by pulling it out (Tightening torque: 1.5 – 2.5kg.cm).
7. Reassemble the cylinder according to the reverse procedures.

(3) Cylinder assembly

<Inspection>

1. Check if rotating surface of the lower cylinder has no damages such as scratches, cracks, etc.
2. Check to see smooth rotation of the upper cylinder. If abnormality is found, replace the cylinder assembly.

<Replacement>

1. Remove the preamplifier (1) by removing two securing screws (8).
2. Disconnect the connector (2).
3. Remove three cylinder securing screws (4).
4. Remove the cylinder assembly (5).
5. Position the cylinder base (7) first. Mount a new cylinder assembly using the previous steps in reverse order, taking care not to touch the video heads directly and not to damage the cylinder surface.
6. Perform the tape transport adjustment.

Fig. 4-2-6 Cylinder assembly replacement

(4) Lower cylinder assembly

<Inspection>

1. Check if rotating surface of the lower cylinder has no damages such as scratches, cracks, etc.
2. Check to see smooth rotation of the lower cylinder.
3. Check if the P.C. board is not damaged. If any abnormality is found, replace the cylinder assembly.

<Replacement>

1. Remove the cylinder assembly (Fig. 4-1-6).
2. Remove the ground cap (5).
3. Remove the rotor (11).
4. Remove the stator (13).
5. Remove the cylinder base securing screw (14) and then the cylinder base (15) can be removed.
6. Remove the upper cylinder assembly (17). (Refer to item "1-4-2".)
7. Replace the lower cylinder assembly (16).
8. Mount a new cylinder assembly using the previous steps in reverse order, taking care not to touch the video heads directly or not to damage the cylinder.
9. Perform the tape transport adjustment.

Fig. 4-2-7 Lower cylinder assembly replacement

(5) Head cleaner assembly replacement

1. Remove the spring (1) from the hook at the ACE base (A).
2. Remove the stop ring (2) and remove the head cleaner assembly (3).
3. Replace the head cleaner assembly in the reverse order of removal.

Note:

- Take care that the head cleaner roller (B) is not contaminated by grease, oil, dust, etc.
- After remounting, check to see the head cleaner assembly is smoothly rotating and the stopper (C) is attached to the cylinder base (D).

Fig. 4-2-8 Head cleaner assembly replacement

1-4-3. Transport System Parts Replacement

(1) ACE head assembly replacement

1. Disconnect the FPC (8) from the connector.
2. Remove the head cleaner spring (13) from ACE main base (1).
3. Remove the taper nut (3).
4. Turn the ACE height adjusting nut (7) counterclockwise and remove it upward in order to remove the ACE base assembly (5).

Note:

Note positions of ACE main base (1) and the upper surface of taper nut (3).

5. Remove the E-ring (9) and the azimuth adjusting screw (2) in order to remove the ACE head assembly (11).
6. Replace the ACE head assembly (11), according to the reverse procedures.
7. Mount the taper nut (3) and the spring (13) in the reverse order of removal and insert the FPC (8) into the connector.

Note:

- When mounting ACE torsion spring (4), first insert the tip of the spring into the hole on the main base and then hook the opposite tip of the spring to ACE main base (1) which has been inserted into ACE post (12). Mount the taper nut (3) while moving the base (1) counterclockwise with your hand.

Fig. 4-3-1

(2) No. 8 guide sleeve replacement

1. Remove No. 8 cap (1) and No. 8 guide sleeve (2) in this sequence as shown in Fig. 4-3-2. When reassembling, perform the previous steps in reverse order.
2. To mount No. 8 guide sleeve (2), insert No. 8 cap (1) onto No. 8 post (3) and push the cap downward while turning it left and right.

Note:

- No. 8 guide sleeve functions as reference for tape transport, so the replacement should be made carefully not to damage the main base flatness.
- When mounting the No. 8 cap, mount the cap with its slant surface facing to cassette side.
- The guide sleeve has a directional characteristic, so take care when inserting it. Do not insert it upside down. The lower flange thickness is higher than the upper thickness by about 1.6mm.

Fig. 4-3-2

(3) FE head replacement

1. Disconnect the 2P connector of the FE head.
2. Remove the FE head mounting screw (5) shown in Fig. 4-3-3 and the FE head (6) can be removed.
3. Remount a new FE head and tighten the FE head mounting screw (5).
4. Connect the 2P connector.
5. Perform the transport adjustments, starting check from the linearity adjustment.

Fig. 4-3-3

(4) No. 1 guide roller replacement

1. Remove the nut (1) shown in Fig. 4-3-3 and then remove the No. 1 guide roller (2).
When removing the nut (1), note that inlet lever (7) detaches from stopper and the lever does not hit cylinder.
(Before removing, note the number of threads exceeding the surface of the nut of the inlet lever. Take care that the lever does not hit the cylinder by removing the lever from the stopper when the nut is removed.)
2. Mount the No. 1 guide roller according to the reverse procedures. (Tighten the nut until the same thread number appears so that the roller will be of the same height as before.)
3. After replacing the No. 1 guide roller, perform the tape transport adjustment, starting from the linearity adjustment.

Note:

- Confirm that inlet lever is in the position which is shown in Fig. 4-4-2.

(5) Impedance roller replacement

(Depending on the model, the impedance roller is included.)

1. Remove the impedance roller cap (10), shown in Fig. 4-3-4.
2. Remove the stop ring (11).
3. Mount a new impedance roller assembly in the reverse order of removal.
4. After replacement of the impedance roller, perform the tape transport adjustment from the linearity adjustment.

Fig. 4-3-4

(6) S, T-guide rollers replacement

The same replacement procedures will be applied for both S and T-guide rollers.

1. Loosen the set screw (2), shown in the Fig. 4-3-5.
2. Turn the guide roller (1) counterclockwise and remove it.
3. Replace the guide roller by reversing the procedures.
4. After replacing the guide roller, perform the tape transport adjustment from the linearity adjustment.

Note:

- Take care since this guide roller has no O-ring.
- Tighten the set screw (2) with light pressure to allow the guide roller height to be adjusted.
- The T-guide roller has a mark on the upper flange, while the S-guide roller has no mark. Do not exchange them when remounting.

Fig. 4-3-5

(7) S, T-sliders replacement

1. Remove the cylinder assembly.
2. Move the slider up manually to the loading position.
3. Remove the slider stopper (4) and the torsion spring (5), shown in Fig. 4-3-5.
4. Remove the guide roller and reinstall it in a new slider according to the procedures for replacement of S, T-guide rollers.
5. Replacement is made by reversing above procedures. When mounting the torsion spring and the slider stopper, hold the rear side of the loading link (6), shown in Fig. 4-3-5 from the cylinder mounting hole.
6. After completion of the replacement, perform the rough adjustment in the tape transport adjustment.

Note:

- Place the torsion spring in such a way that the shorter arm will come at the bottom. When mounting the slider stopper, confirm the torsion spring is not positioned over the hook at the slider.
- When the slider is replaced, always apply grease to the slider receptacle as shown in Fig. 4-3-5.

(8) S, T-loading torsion springs replacement

The same replacement procedures will be applied for both S and T-loading torsion springs.

1. Remove the front loading assembly.
2. Place the deck vertically and remove the bottom plate and the mechanism P.C. board.
3. Remove the slider stopper (4) and the S, T-loading torsion springs (5) shown in Fig. 4-3-5. with the slider set to the unloading state.
4. When replacing, use above steps in reverse order. Remount the S, T-loading torsion springs while holding the rear side of the loading link (6), shown in Fig. 4-3-5.
5. After completion of the replacement, perform the transport adjustment from the linearity adjustment.

Note:

- The form of the torsion spring differs according to the slider type, S or T. Confirm that you take the right one in mounting.
- The torsion spring is placed in such a way that the shorter arm will come at the bottom. When mounting the slider stopper, check to see that the torsion spring is not positioned over the hook at the slider.

(9) OSC guide lever assembly replacement

1. Remove the front loading assembly.
2. Remove the OSC guide nut (1) by turning it counterclockwise and remove the OSC guide lever assembly (2) together with the spring (3) upward by turning them counterclockwise.

Note:

- Note the number of threads exceeding the surface of the nut.
3. Replace the OSC guide lever assembly (2) with a new one.

Note:

- After completion of the replacement, place the hook at the upper end of spring (3) on the lever (2) to keep the OSC guide lever assembly with the hook attached.
4. Assemble by reversing above procedures. At that time, tighten the nut (1) so that the position of it is the same as before.

Note:

- Make sure that the OSC drive lever (4) matches the gear of the OSC guide lever assembly (2). (Align each protruded part.)
- Apply grease to the contacting surface between the OSC guide lever assembly (2) and the nut (1) and around the base of post (5).
- Note that the upper and lower sides of the nut are not mistaken.
- When mounting the OSC guide lever in the main base, note that it does not bend by touching cassette datum post.

Fig. 4-3-6

5. After completion of the replacement, perform the adjustment according to item "2-5-4. (3) 5 OSC guide lever adjustment".

(10) No. 10 guide replacement

1. Remove the front loading assembly.
2. Remove the screw (1) and remove No. 10 guide (2).
3. Assemble by reversing above procedures.
4. After completion of the replacement, perform the tape transport adjustment from the OSC guide lever adjustment.

Put the stopper portion of No.10 guide into the hole (4), and tighten the screw (1)

Fig 4-3-7

1-4-4. Loading Motor Assembly Replacement

1. Remove the loading belt.
2. Remove the screw (1) and remove the loading motor assembly from the main base.
Note that the lever of FE head assembly does not hit the cylinder.
3. Replace the loading motor assembly in the reverse order of removal. When remounting, turn the FE head assembly in the direction shown by the arrow.

Note:

- Take care that the loading belt is not twisted.
- Make sure that the protruded part (D) of the FE head assembly is positioned at the left of the wall (C) of the loading motor assembly.

Fig. 4-4-1 Loading motor assembly replacement

Fig. 4-4-2

1-4-5. Stopper Plate Replacement

1. Remove the stopper plate from the main base by removing the screw (1).
2. Mount the stopper plate on the main base with the screw (1) in such a way that the boss (A) will match the hole (A)'.

Fig. 4-5-1 Stopper plate replacement

1-4-6. Drive Shaft Assembly Replacement

1. Remove the main brake charge lever according to the main brake charge lever mounting procedure. (Refer to item "1-4-7 (2)".)
2. Remove the loading belt and loading motor assembly according to the loading motor assembly replacement procedures. (Refer to item "1-4-4. Loading Motor Assembly Replacement".)
3. Remove two screws (2) and remove the drive shaft assembly.
4. Remount the drive shaft by reversing above procedures.

Note:

- Insert the projection (G) of the drive shaft assembly into the hole (G') on the main base and energize the worm section in the direction of the arrow (F). (The worm section should not engage the gear (H).)
- As shown in Fig. 4-6-2, place the pot MB clutch with its projection (E) facing to the inside of the main base and the groove section facing upward. (At this time, the spring can be watched from the upper side).
- The worm part of the drive shaft assembly should be applied grease.

Fig. 4-6-1 Drive shaft assembly replacement

Fig. 4-6-2 Position of pot MB clutch

1-4-7. Main Brake System Parts Replacement

(1) Main brake lever assembly replacement

1. Remove the front loading assembly.
2. Remove the springs from the hooks (1) and (2) of the main base.
3. Remove the main brake lever assembly upward by sliding it in the direction of the arrows (B) and (D) while pushing the chassis in the direction of the arrows (A) and (C).
4. Mount a new main brake lever assembly in the reverse order of removal.

Note:

- When replacing the main brake lever, take care not to touch the pad surface of the brake.

Fig. 4-7-1

(2) Main brake charge lever replacement

1. Remove the front loading assembly.
2. Remove the S, T-main brake lever assemblies. (Refer to item (1))
3. Remove the spring from the hook (1) of the main base.
4. When removing the main brake charge lever, turn the idle arm assembly in the direction of the arrow (A) and push the hooks (2) and (3) in the direction of the arrows (C) and (D) while lifting the (B) section slightly.
5. Mount new main brake charge levers in the reverse order of removal.

Fig. 4-7-2

1-4-8. Idle Arm Kick Lever Replacement

1. Remove the front loading assembly, or move the cassette holder down to the loading position by turning the loading motor without inserting the cassette.
2. Pull the idle arm assembly up by turning it in the direction of the arrow (A) and pushing its claw (1) with tweezers, etc. in the direction of the arrow (B).
3. Install a new idle arm kick lever by reversing above procedures.

Note:

- Install the idle arm kick lever so that the (C) section may properly engage the (D) section of the idle arm assembly.

Fig. 4-8-1

1-4-9. S-soft Brake Replacement

1. Remove the S-soft brake spring from the hook (3) of the S-slider lock lever and the hook (2) of the S-soft brake.
2. To remove, move the claw (1) of the S-soft brake with tweezers, etc. in the direction shown by the arrow (C), pull the S-soft brake up and turn it in the direction of the arrow (B).
3. Mount a new S-soft brake by reversing the above procedures.

Note:

- When installing the S-soft brake, insert the boss (A)' of the S-soft brake into the cam groove (A) of the cam gear.
- Before the S-soft brake lever is attached, the S-slider lock lever should be turned in the direction of the arrow (D).
- Take care not to stretch the hook of the S-soft brake spring.

Fig. 4-9-1 S-soft brake replacement

1-4-10. S-slider Lock Replacement

1. Remove the S-soft brake. (Refer to item "1-4-9. S-soft Brake Replacement").
2. Remove the tension regulator assembly. (Refer to item "1-4-26. (1) Tension Regulator Assembly Replacement").
3. Turn the drive shaft pulley in the direction of the arrow(A) and move the S-slider from the S-slider lock in the direction of the arrow (B) (Refer to Fig. 4-10-2 A and B.)
4. Remove the S-slider lock by turning it in the direction of the arrow (C) and moving the claw (1) in the direction of the arrow (D).
5. Mount a new S-slider lock in the reverse order of removal.

Note:

- After completion of the replacement, put the S-slider back in its place where it was.

Fig. 4-10-1

Fig. 4-10-2

1-4-11. T-soft Brake Replacement

1. Remove the T-soft brake spring from the hook (2) of the main base.
2. Move the claw (3) of the T-soft brake in the direction of the arrow and remove the T-soft brake upward.
3. Remove the T-soft brake spring from the T-soft brake.
4. Mount a new T-soft brake by reversing above procedures.

Note:

- When mounting the T-soft brake spring on the T-soft brake, attach the opening side (1)' of the hook to hole (1) so that the opening will face upward.
- Take care in replacement not to touch the brake pad surface.

Fig. 4-11-1 T-soft brake replacement

1-4-12. Idle Arm Assembly Replacement

1. Pull up the cap (1) and remove the idle arm assembly upward.
2. Remount a new idle arm assembly so that the protruded part (A) of the idle arm kick lever may fit into the concave part (A) on the idle arm assembly.
3. Mount the cap (1).

Fig. 4-12-1 Idle arm assembly replacement

1-4-13. S, T-reel Table Replacement

(1) S (Supply) reel table assembly replacement

1. Remove the S-soft brake. (Refer to item "1-4-9. S-soft Brake Assembly Replacement".)
2. Remove the tension regulator assembly. (Refer to item "1-4-26. (1) Tension regulator assembly replacement".)
3. Remove the stop ring (1) and remove the S-reel table assembly upward.
4. After cleaning the reel shaft with a cleaning kit, lubricate it with one or two drops of oil using lubrication oil kit.
5. Replace the S-reel table assembly in the reverse order of removal.

Fig. 4-13-1 Supply reel table assembly replacement

(2) T (Take-up) reel table assembly replacement

1. Remove the T-soft brake. (Refer to item "1-4-11. T-soft Brake Replacement".)
2. Remove the stop ring (1) and remove the T-reel table assembly upward.
3. After cleaning the T-reel shaft with a cleaning kit, apply it with one or two drops of lubrication oil kit. Apply oil also to the base (A) of the T-reel shaft.
4. Replace the T-reel table assembly in the reverse order of removal.

Fig. 4-13-2 Take-up reel table assembly replacement

1-4-14. Clutch System Parts Replacement

(1) Clutch assembly replacement

1. Turn the deck upside down and remove the reel belt.
2. Remove two screws (1) and remove the clutch holder.
3. Remove the clutch assembly upward.
4. Clean the clutch post using the cleaning kit, and then apply one or two drops of lubrication oil kit after confirming that the washer (2) is inserted into the clutch post.
5. When remounting, use the reverse procedures.
6. Check the reel torque, using the torque cassette. (Refer item "1-5-3. Reel Torque Check".)

Note:

- When remounting the clutch assembly on the deck, each protruded part of the clutch assembly, (A) and (B), should match each hole on the main base according to size.
- When remounting, take care the belt is not twisted.
- Do not deform the clutch holder. And, the hole (3) makes to be hooked by the clutch post groove.
- Be sure to insert the washer (2).

Fig. 4-14-1 Clutch assembly replacement

(2) Clutch cam replacement

1. Turn the deck upside down and remove the reel belt.
2. Remove the clutch assembly according to the replacing procedures. (Refer to item "1-4-14. (1) Clutch assembly replacement".)
3. Remove the clutch cam.
4. Remount a new clutch cam by reversing the removal procedures.
5. When replacing, apply grease to the whole outer surface of three protruded portions (4) of the clutch cam.

Fig. 4-14-2 Clutch cam replacement

<Clutch cam installation>

(Refer to Fig. 4-14-3.)

Note:

- Check that the move clutch ring has not floated from main base before attaching the clutch cam.
- Move the boss (3) in the direction of the arrow.
- Align the O mark on the gear of the clutch cam and the Δ mark on the cam gear.
- Insert the end of the rec-inhibiting lever between the outset wall and the clutch cam wall.

Fig. 4-14-3

1-4-15. Pinch Roller Assembly Replacement

1. Remove the T-soft brake. (Refer to item "1-4-11. T-soft Brake Replacement".)
2. Remove the S-soft brake. (Refer to item "1-4-9. S-soft Brake Replacement".)
3. Turn the main base upside down.
4. Remove the stop ring (1).
5. Place the main base with the right side up.
6. Remove the pinch roller assembly and the pinch torsion spring.
7. Apply grease to a new pinch roller assembly. (Refer to "Apply grease (2)".)
8. Attach the pinch torsion spring to the pinch lever assembly and then slightly insert the shaft of the pinch lever assembly into the sleeve hole (3) on the main base.
9. Remove the pinch lever spring from the hook of the pinch lever assembly, hook it on the post (4). Then, insert the pinch lever assembly deeply into the sleeve and insert the barring (5) into the groove (6) without any clearance.
10. Turn the main base upside down with the pinch lever assembly still held from the right side of the main base.
11. Mount the stop ring on the shaft.
12. Place the main base with the right side up and attach the T and S-soft brakes.

Note:

- When attaching the pinch roller assembly, the pinch torsion spring may detach. At this time, after removing once the pinch roller assembly, put pinch torsion spring again and attach pinch roller again.

- Take care not to touch the pinch roller, or not to soil it.

Fig. 4-15-1

1-4-16. Cam Gear Replacement

1. Remove the S-soft brake. (Refer to item "1-4-9. S-Soft Brake Replacement".)
2. Turn the main base upside-down.
3. Remove the clutch holder, clutch assembly and the clutch cam. (Refer to item "1-4-14. Clutch System Parts Replacement".)
4. Remove stop ring (3) and remove the relay gear.
5. Remove stop ring (1) and remove the cam gear upward by releasing the hook (4).
6. Apply grease to a new cam gear. (Refer to Fig. 4-16-2 "View of cam gear".)
7. Press the T-loading link assembly and the S-loading link assembly in the direction of the arrows (A) and (B) respectively.
8. Set the hole (D) on the mode drive slider, hole (E) on the band brake lever and the hole (F) on the P. OSC drive lever, respectively, to each hole on the main base.
9. Press the moving clutch lever in the direction of the arrow (G).
10. Move the claw (1) in the direction of the arrow (C) and mount the cam gear so that the hole (H) on the cam gear can match the hole on the main base.
11. When reassembling, used the removing steps in the reverse order.
12. After completion of the assembly, make sure by turning the loading belt that the cam gear and its peripheral parts can function properly.

Fig. 4-16-1

Fig. 4-16-2 View of cam gear

Note:

- The parts enclosed in a square require to perform phase matching with the cam gear.

Fig. 4-16-3 Phase matching in assembling the cam gear

1-4-17. P. OSC Drive Lever Replacement

1. Remove the S-soft brake. (Refer to item "1-4-9. S-Soft Brake Replacement".)
2. Remove the T-soft brake to dismount the pinch roller assembly and the torsion spring. (Refer to item "1-4-15. Pinch Roller Assembly Replacement".)
3. Turn the main base upside-down.
4. Remove the stop ring (1) and remove the relay gear. (Refer to item "1-4-18. Relay Gear Replacement".)
5. Remove the clutch holder, clutch assembly and the clutch cam. (Refer to item "1-4-14. (2) Clutch cam Replacement".)
6. Remove the stop ring (2) and bend the claw (3) in the direction of the arrow (A) to remove the cam gear upward. (Refer to item "1-4-6. Cam Gear Replacement".)
7. Remove the P. OSC drive lever in the direction of the arrow (B).
8. Apply grease to the portion (4) at the new P. OSC drive lever. (Refer to Fig 4-17-2.)
9. Replace the P. OSC drive lever by reversing above procedures. When installing, insert the barring (6) of the P. OSC drive lever into the hole (5) on the main base and also insert the lock plate of the P. OSC drive lever into the hole (7) on the main base in the direction of the arrow (C).

Fig. 4-17-1 P. OSC drive lever replacement

1-4-18. Relay Gear Replacement

1. Remove the stop ring (1) and remove the relay gear upward.
2. Apply grease to the periphery of the gear (two parts) of the new relay gear. Also apply grease to the outer surface of the relay gear post.
3. Remount the relay gear in the reverse order of removal. (Note: Gear phase can be adjusted arbitrarily.)

Fig. 4-18-1 Relay gear replacement

Fig. 4-17-2

1-4-19. S, T-Loading Link Assemblies Replacement

1. Remove the clutch holder, clutch assembly and the clutch cam. (Refer to item "1-4-14. (2) Clutch cam replacement".) In this case, the main base is turned upside-down.
2. Remove the relay gear. (Refer to item "1-4-18. Relay Gear Replacement".)
3. Remove the cam gear. (Refer to item "1-4-16. Cam Gear Replacement".)
4. Place the main base with the right side up.
5. Remove the slider stopper (2) and the torsion spring (4) from the S-slider. (When replacing the T-loading link assembly, remove the slider stopper (3) and the torsion spring (5) from the T-slider.)
6. Turn the main base upside-down.
7. Remove the stop ring (1) and remove the S-loading link assembly. (When replacing the T-loading link assembly, remove the T-loading link assembly.)
8. When remounting, use the reverse procedures.

Note:

- For items 5 to 8., refer to item "1-4-3. (7) S, T-sliders replacement".)

Fig. 4-19-1 T, S-loading link assemblies replacement

Fig. 4-19-2

1-4-20. Worm Wheel Replacement

1. Remove the S-main brake lever and T-main brake lever assembly and then remove the main brake charge lever. (Refer to item "1-4-7. (2) Main brake charge lever replacement".)
2. Remove the loading belt and then loading motor assembly. (Refer to item "1-4-4. Loading Motor Assembly Replacement".)
3. Remove the drive shaft assembly. (Refer to item "1-4-6. Drive Shaft Assembly Replacement".)
4. Remove the relay gear by detaching the stop ring (2) (Refer to item "1-4-18. Relay Gear Replacement".)
5. Remove the worm wheel by detaching the stop ring (1).
6. Apply grease the outer surface of the gear (2 portions) of the new worm wheel. Also apply grease to the periphery of the gear post.
7. Remount the worm wheel in the reverse order of removal.
(Gear phase can be adjusted arbitrarily.)

Fig. 4-20-1

1-4-21. OSC Drive Lever Replacement

1. Remove the T-soft brake. (Refer to item "1-4-11. T-Soft Brake Replacement".)
2. Remove the S-soft brake. (Refer to item "1-4-9. S-Soft Brake Replacement".)
3. Remove the pinch roller assembly. (Refer to item "1-4-15. Pinch Roller Assembly Replacement".)
4. Remove the OSC guide lever assembly and the torsion spring (2) by detaching the nut (1). (Refer to item "1-4-3. (9) OSC guide lever assembly replacement".)
5. Remove the OSC drive lever assembly in the direction of the arrow (B). (Refer to Fig. 4-21-2.)
6. Remount the OSC drive lever in the reverse order of removal.
7. When the OSC guide lever assembly is replaced, perform the OSC guide lever adjustment. (Refer to item 1-5-4 (3) 5))

Note:

- Align the O mark shown by (A)' on the OSC drive lever and the gear (A) at the left end of the OSC lever.

Fig. 4-21-1

Fig. 4-21-2

Fig. 4-21-3

1-4-22. Band Brake Lever Assembly Replacement

1. Remove the tension regulator assembly, band brake assembly and the band holder as a unit at a time. (Refer to item "1-4-26. (1), (2), (4)".)
2. Turn the deck upside-down and remove the cam gear. (Refer to item "1-4-16. Cam Gear Replacement".)
3. Remove the spring, taking care that the spring is not stretched or deformed. Slide the mode drive slider in the direction of the arrow (A).
4. Energize the tension spring lever in the direction of the arrow (B) and remove the band brake lever assembly.
5. Remount a new band brake lever assembly by reversing above procedures.
6. After all parts are assembled, check position of the tension pole and its adjustment and check the back tension. (Refer to items "1-5-2. Check of Tension Pole Position and 1-5-3. Reel Torque Check".)

Fig. 4-22-1

1-4-23. Mode Drive Slider Replacement

1. Remove the cam gear. (Refer to item "1-4-16. Cam Gear Replacement".)
2. Remove the band brake lever assembly. (Refer to item "1-4-22. Band Brake Lever Assembly Replacement".)
3. Move the mode drive slider to the left and pull it upward. (Refer to Fig. 4-23-1.)
4. Replace the mode drive slider in the reverse order of removal.

Precautions in the installation: (Refer to Fig. 4-23-2.)

- Make sure that the mode drive slider is gripped in the claw of the outset on the main base. (The band brake lever assembly is attached.)
- Make sure that the mode drive slider is gripped in the claw on the tension spring lever.

Fig. 4-23-1

Fig. 4-23-2

1-4-24. Cassette-in Lever Replacement

1. Remove the spring from the hooks of the cassette-in lever and the band brake lever assembly, taking care not to stretch or deform the spring.
2. Off-hook the claw hooked on the main base to remove the cassette-in lever.
3. When remounting the cassette-in lever, use the above steps in reverse order.

Fig. 4-24-1 Cassette-in lever replacement

1-4-25. Rec-inhibiting Lever Replacement

1. Remove the clutch cam. (Refer to item "1-4-14. (2) Clutch cam replacement".)
2. Remove the spring from the hooks of the main base and the rec-inhibiting lever, taking care not to stretch or deform the spring.
3. Off-hook the claw hooked on the main base and remove the rec-inhibiting lever.
4. Replace the rec-inhibiting lever by reversing above procedures.
5. Install the clutch cam. (Refer to item "1-4-14. (2) Clutch cam replacement".)
6. Reinstall the clutch assembly and clutch holder. (Refer to item "1-4-14. (1) Clutch assembly replacement".)

Fig. 4-25-1

1-4-26. Tension Regulator Parts Replacement

(1) Tension regulator assembly replacement

1. Remove the S-soft brake. (Refer to item "1-4-9. S-soft Brake Replacement".)
2. Remove the tension spring, taking care not to stretch or deform the spring.
3. Off-hook the claw of the outset at the main base hooked on the shaft of the tension regulator assembly and remove the tension regulator assembly upward. Note that the outset hook at the main base is not deformed.
4. Remove the band brake from the hook of the tension regulator assembly. Take care that the felt surface of the band brake is not stained, bent or damaged.
5. Clean the shaft of a new tension regulator assembly and then apply one or two drops of oil. When replacing the tension regulator assembly, perform the previous steps in reverse order. Take care not to apply oil to the tension pole.
6. Check position of the tension pole and its adjustment and check the back tension. (Refer to items "1-5-2. Check of Tension Pole Position and 1-5-3. Reel Torque Check".)

Fig. 4-26-1

(2) Band brake replacement

1. Remove the S-soft brake. (Refer to item "1-4-9. S-soft Brake Replacement".)
2. Remove the tension regulator. (Refer to item "1-4-26. (1) Tension regulator assembly replacement".)
3. Remove the band brake from the hook of the band holder.

4. When reinstalling a new band brake, perform the previous steps in the reverse order. Take care not to stain or damage the band brake.
5. Check position of the tension pole and its adjustment and check the back tension. (Refer to items "1-5-2. Check of Tension Pole Position and 1-5-3. Reel Torque Check".)

(3) Tension spring lever replacement

1. Remove the tension spring, taking care not to stretch or deform the tension lever.
2. Move the tension spring lever close to the portion shown by the arrow (A), off-hook the claw hooked on the main base and then remove the tension spring lever upward.
3. Replace the tension spring lever by reversing above procedures.

Fig. 4-26-2

(4) Band holder replacement

1. Turn the band holder as shown in Fig. 4-26-3. (so that the protruded part of the band holder nearly matches the hole shape of the band holder.)
2. Remove the band holder upward.
3. Remove the band brake from the hook of the band holder. Take care not to stain, bend or break the band brake.
4. Replace the band holder in the reverse order of removal.
5. Check position of the tension pole and its adjustment and check the back tension. (Refer to items "1-5-2. Check of Tension Pole Position and 1-5-3. Reel Torque Check".)

Fig. 4-26-3

1-4-27. Capstan Motor Replacement

1. Remove the FFC (1) for capstan motor and the reel belt (3).
2. Remove the mechanism P. C. board (2) from the rear of the deck. (The screws are not the same, so do not exchange when using.)

Fig. 4-27-1

3. Remove the FFC (4) from the capstan motor by sliding the connector holder in the direction shown by the arrow.

Fig. 4-27-2

4. Hold the capstan motor on the rear of the deck. Remove three screws (5) on the front side of the deck and then remove the motor.

Fig. 4-27-3

5. First, position the capstan motor as shown in the following figure (6) and then mount the motor from the rear side of the deck, taking care not to damage the shaft, motor, etc.

Fig. 4-27-4

6. Next, secure the capstan motor with three screws from the upper side of the deck. (In this case, do not use the screws once removed. Precisely mount the motor without any clearance.)

Clearance not allowed.

Fig. 4-27-5

7. Connect the FFC to the motor, taking care of its top and bottom side. It should be inserted with the metal terminal side facing downward. Insert the FFC and securely lock the connector by moving it as shown by the arrow.

Fig. 4-27-6

8. Hereafter, proceed the remounting, using the removing procedures in the reverse order. When remounting, take care that the capstan motor, reel belt, FFC, etc. are not in contact with each other. Also take care the belt is not twisted and stained with grease.
9. After completion of the capstan motor replacement, check the transport characteristics according to the transport adjustment procedure. (Refer to item "1-5-4. (3) Tape transport system adjustment".)

1-4-28. Capstan Thrust Replacement

1. Remove the screw (1) and then remove the capstan thrust (2).
2. When the capstan thrust is replaced, position the capstan thrust referring to the hole so that the contact part (3) is just above the capstan shaft.

Note:

- Take care not to deform the plate spring of the capstan thrust.

Fig 4-28-1

1-4-29. Ground Brush Replacement

1. Remove the screw (1) and then remove the brush.
2. Clean the ground cap using alcohol.
3. Place the brush so that it can be contact with the center of the ground cap.

Fig. 4-29-1 Ground brush replacement

1-5. Check and Adjustment

1-5-1. How to Check Mechanism Positions

Turning the pulley of the drive shaft assembly allows to move to each position.

Use the position marks of the cam gear and the projection of the main base boss as guideline.

Fig. 5-1-1

1-5-2. Check of Tension Pole Position

1. Check that the protruded part of band brake adjuster has turned to the direction of the lower right.
2. Set the deck to the play mode with the front loading assembly removed. (Shift the mode by referring to item "1-5-1. How to Check Mechanism Positions".)
3. Turn the S-reel table 3 – 4 turns in the clockwise direction.
4. Make sure the peripheral of the outset (shown by shaded arrow) of the tension regulator assembly is $1\text{mm} \pm 0.5\text{mm}$ away from the main base edge as shown in Fig. 5-2-1.
5. If necessary, adjust the position by turning the band brake adjuster in the direction shown by \leftrightarrow . After the adjustment, check to see the tension pole position by turning the S-reel table 3 – 4 turns clockwise.

Fig. 5-2-1

1-5-3. Reel Torque Check

(1) Reel torque

1. REVIEW mode
Poor torque may not wind the tape. On the other hand, excessive torque will cause damage to the tape during REVIEW mode.
2. Record/Playback (take-up side) mode
Too little torque does not rewind the tape to the end. If too large torque, the tape may be stretched by excessive tension.
3. Inspection
Rewind the torque cassette (recorded in SP mode) to the end, then check the torque values shown below:

Review	212.5 ± 77.5g-cm
Record/Playback	85 ± 25g-cm

 For checking the method, refer to the following item (2).

(2) Reel torque and back tension check

1. First, record a TV broadcast program on the entire torque cassette tape (KT-300NR) in the SP mode.
2. Load the torque cassette in the VTR and feed forward the tape before proceeding with measurement.
3. Set the VTR to the REVIEW mode and feed the tape for about 15 sec., and then make sure the take-up torque of 135 – 290g-cm is obtained while observing the left torque meter.
4. After completion of step 3, set the VTR to the PLAY mode and feed the tape for about 30 sec. Read the right torque meter and check the torque of 60 – 110g-cm is obtained.
5. When the review torque and playback torque are out of limit, replace the clutch assembly.

6. When the clutch assembly and the idle gear are replaced, perform the reel torque check.
7. Confirmation and adjustment of the back tension are performed by using a back tension cassette gauge. First, make sure that the tension pole is positioned correctly. (Refer to item “1-5-2. Check of Tension Pole Position”.) Load a back tension cassette and set the VTR to the PLAY (SP) mode. Make sure the meter is indicating 30 – 45 gf-cm. If the value is out of limit, first make sure the tension lever spring is normal, and then replace the tension regulator assembly as required. (Refer to item “1-4-26. Tension Regulator Parts Replacement”.)

<Precautions for Use of Torque Cassette (KT-300NR)>

1. Before loading a torque cassette in a VTR, always remove tape slack. The tape slack can be removed by rotating the reel to its take-up direction. (The tape tends to slack when there is no reel brake actions.)
2. When the torque cassette is loaded, confirm followings:
 - Make sure the tape does not ride up or over the No. 8 cap. If it does, do not eject the tape but bring the tape to its correct position, taking care not to damage the tape.
 - Make sure the tape is not slackened. If slackened, operate the VTR in FF or REV mode and then stop the tape. Then make sure the tape is not slackened again.
 - After above confirmation, proceed to the reel torque adjustments and confirmation.
3. Cautions for removal of torque cassette
 - When removing the torque cassette from the VTR, set the VTR to the STOP mode and wait for several seconds. Then, make sure the tape is not slackened. Push the EJECT button to remove the cassette.
 - When removing the torque cassette from the VTR, also make sure the tape is not slackened inside the cassette lid before pulling the cassette from the VTR. If the tape is slackened inside the lid, carefully bring the tape in place and then pull the cassette.
4. If the previous precautions 1, 2 and 3 are not performed properly, the tape may be damaged and correct measurements can not be performed.
5. Do not use worn out or damaged tape, if used they may damage video heads on the cylinder. In such a case always replace the tape with a new one. The replacement tape is of E-180, 6.01 ± 0.3m in length.

1-5-4. Tape Transport System

The tape transport system has been precisely adjusted in the factory, so no check and alignment are necessary except the followings:

- Noises observed on the screen
- Tape damage
- Parts, shown in the adjustment procedures for the tape system, item 1-4-3, were replaced.

Electrical signal output terminal required for adjustment differs depending upon the models. Refer to the test pin location in the Electrical Adjustment Section.

<Adjustment reference>

Lower flange height of No. 8 guide is used as the basic reference for the transport adjustment. To keep height of the No. 8 guide, do not apply excessive force onto the main base to prevent the main base from deformation. In case of adjustment for SP mode only unit, please use SP mode alignment tape (ST-C1) instead of LP mode alignment tape (ST-C3), and adjust finely.

(1) Location of tape transport adjustment

Fig. 5-4-1 Tape travel diagram

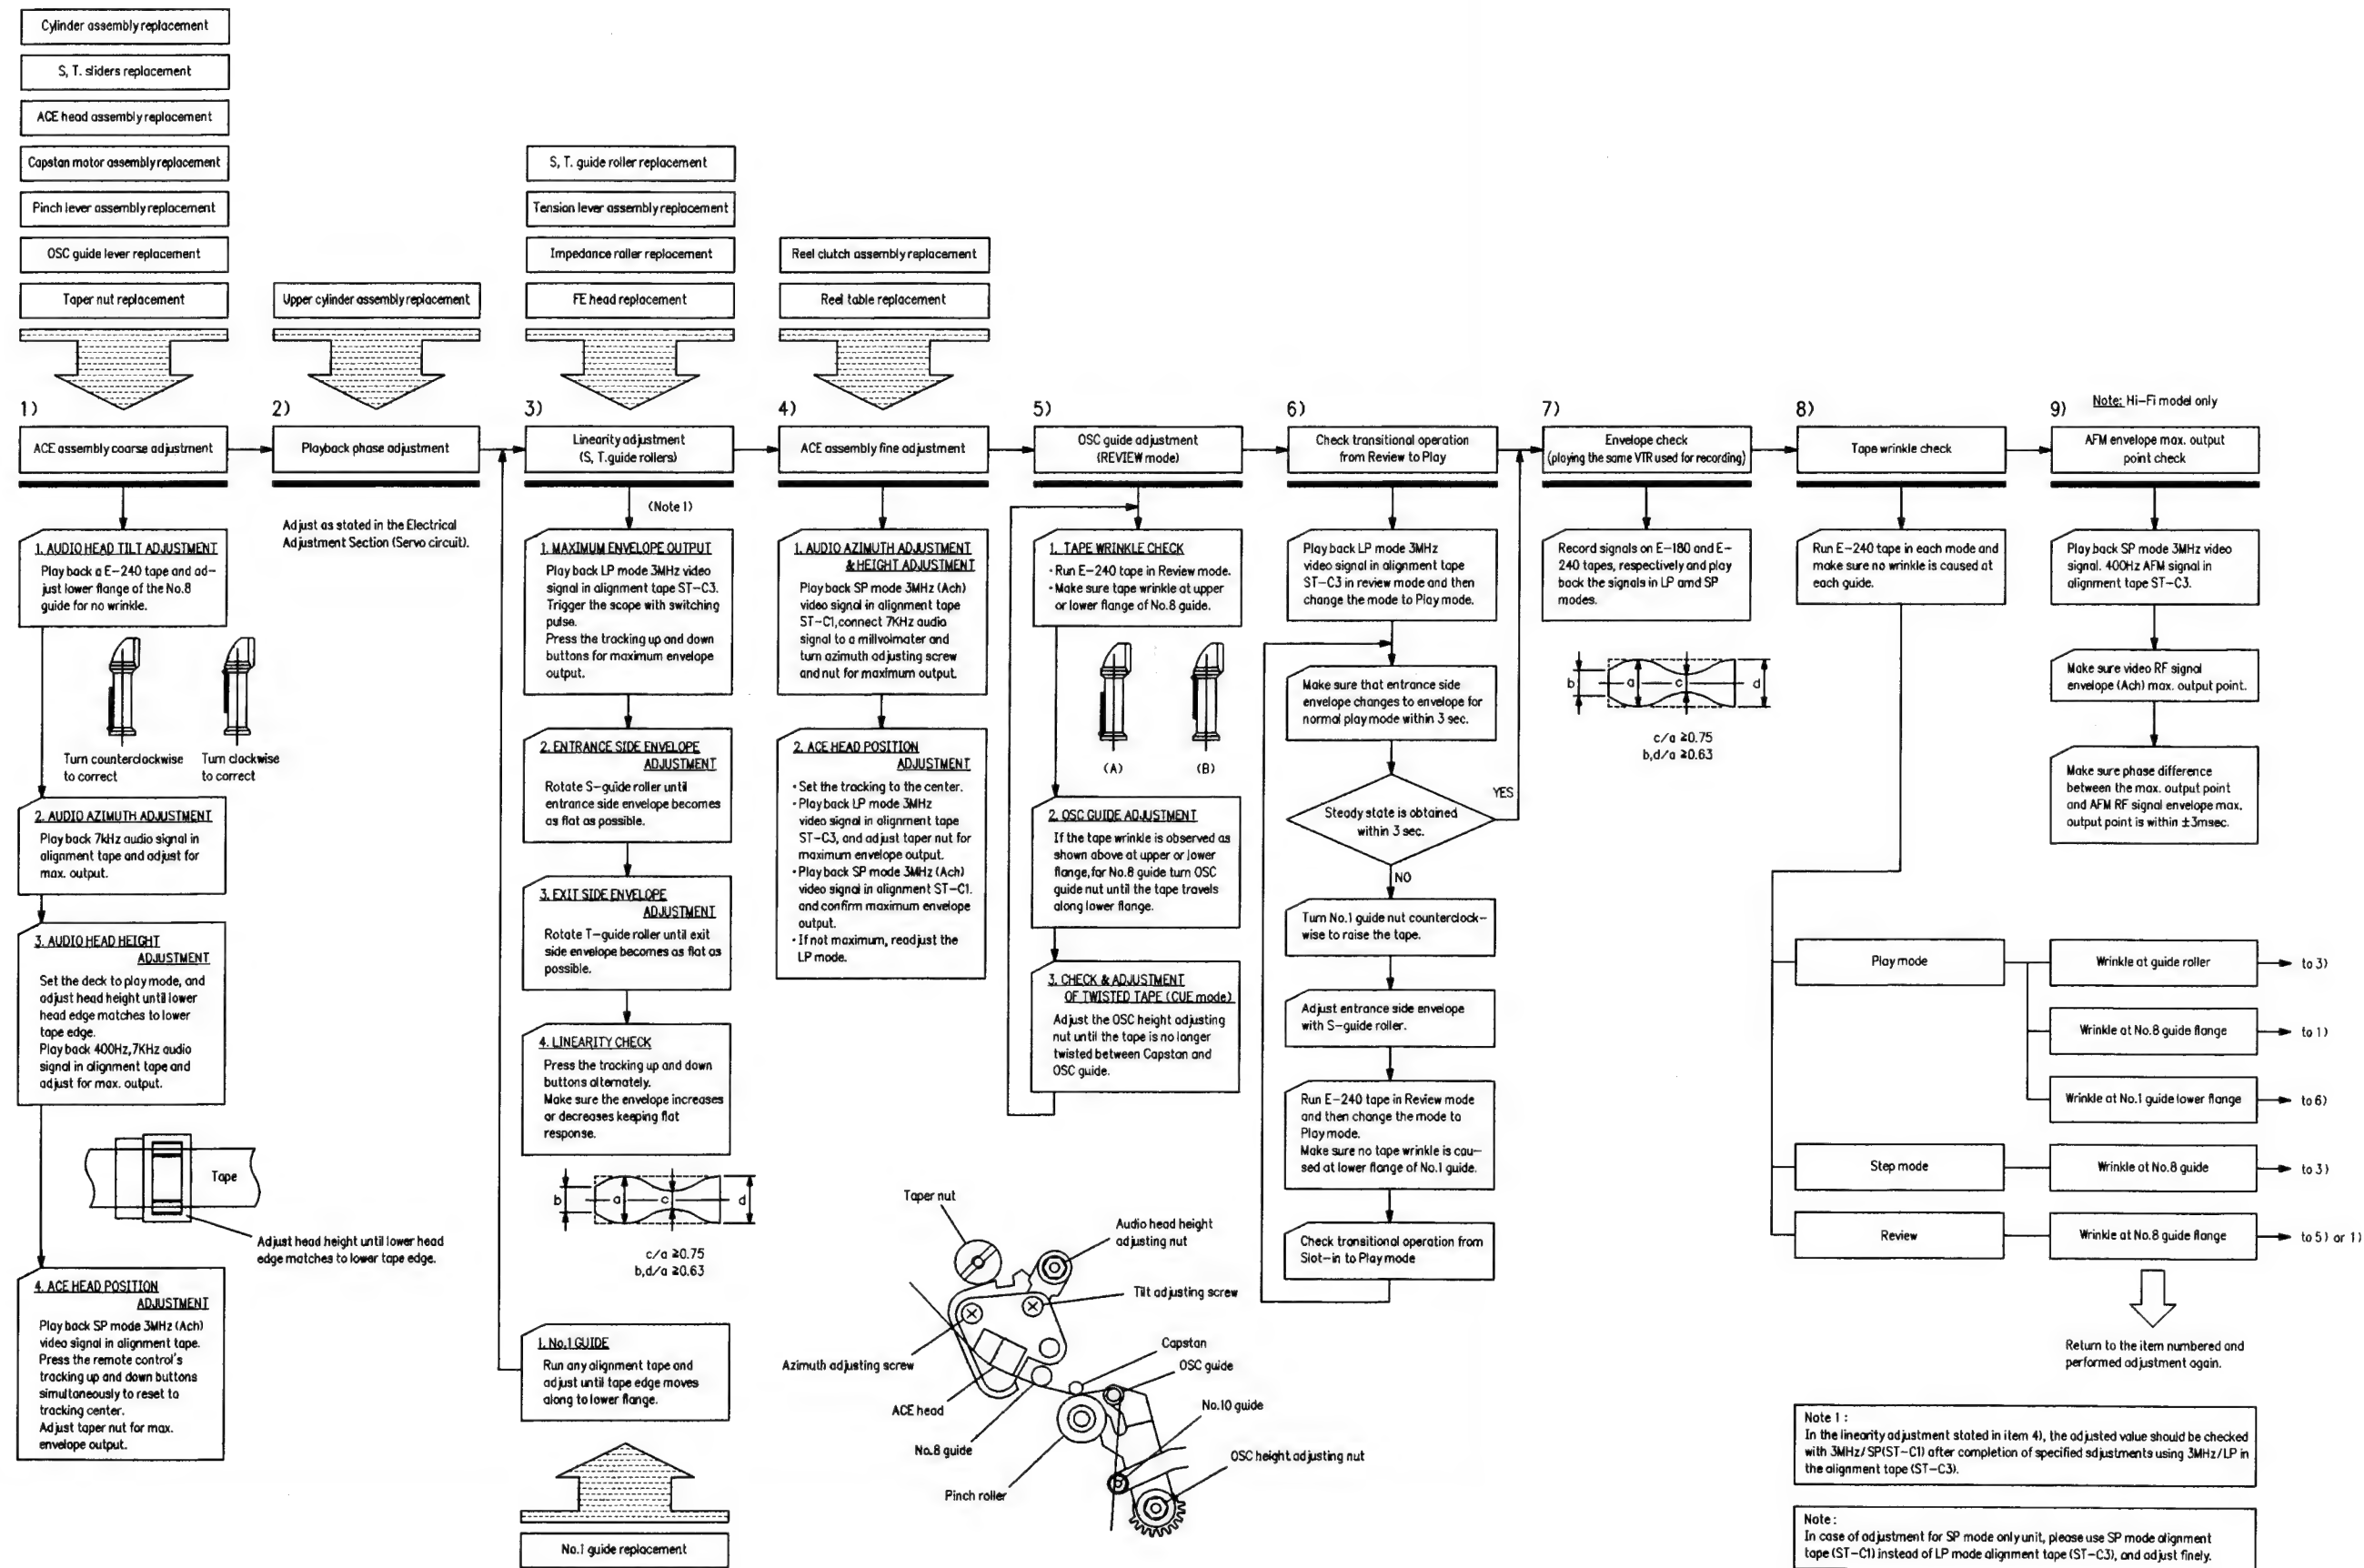

Fig. 5-4-2 Location of tape transport adjustment

(2) Tape transport system adjustment flow chart

(3) Tape transport system adjustment

<Pre-adjustment>

When the part (s) listed in Table 5-4-1 is replaced, perform required adjustments by referring to procedures for the tape transport system. When the part(s) listed in Table 5-4-1 is replaced, the tape path may be changed and may damage alignment tape. To prevent this, first run a E-240 tape and make sure excessive tape wrinkle does not occur at each tape guide.

1. If tape wrinkle is observed at the S, T-guide rollers, turn the S, T-guide rollers until wrinkle disappears.
2. If tape wrinkle is observed at the No. 8 guide, perform the tilt adjustment of the ACE head.
3. If tape wrinkle is observed at the OSC guide, perform the OSC guide height adjustment.

<Adjustment procedures>

1) ACE head assembly coarse adjustment

a. ACE tilt adjustment

1. Play back a E-240 tape and observe running condition of the tape at the lower flange of No. 8 guide.
2. Adjust the ACE tilt adjusting screw until tape wrinkle is caused at the lower flange of No. 8 guide as shown in Fig. 5-4-4 (A).
3. Turn the ACE tilt adjusting screw counterclockwise until the tape travels along the lower flange as shown in Fig. 5-4-4 (B).

b. Audio azimuth adjustment

1. Play back the 400Hz and 7kHz audio signals on the alignment tape ST-C1 in the SP mode.
2. Connect a millivoltmeter or oscilloscope to the audio line output terminal.
3. Turn the ACE azimuth adjusting screw to obtain maximum audio output.

c. Audio head height adjustment

1. Run the alignment tape (ST-C1) in the playback mode.
2. Observe surface of the audio head using a dental mirror.
3. Turn the ACE height adjusting nut so that lower tape edge matches to the lower edge of the control head.
4. Play back the 400Hz, 7kHz audio signal in the alignment tape (ST-C1) and adjust the head height for maximum audio output.

Fig. 5-4-5 Head height

Table 5-4-1	
Parts replacement	Adjustment procedure
<ul style="list-style-type: none">• Cylinder assembly• S, T-sliders• ACE head• Pinch lever assembly• Capstan motor• OSC guide lever assembly• Taper nut	From item 1)
<ul style="list-style-type: none">• Upper cylinder	From item 2)
<ul style="list-style-type: none">• S, T-guide rollers• Tension lever assembly• FE head• No. 8 guide sleeve• No. 1 guide	From item 3)
<ul style="list-style-type: none">• Reel clutch assembly• S, T-reel tables	From item 4)

Fig. 5-4-3

Fig. 5-4-4 Rough check of No. 8 guide

d. ACE head position pre-adjustment

1. Play back the 3MHz video signal in the alignment tape (ST-C1) in the SP mode.
2. Press the remote control's tracking up and down buttons to reset to tracking center, and adjust the taper nut for maximum video signal output after the tracking control is set at its center position.

Note:

- Confirm from Fig. 5-4-3 that clearance (C) is provided between the ACE head and No. 8 guide cap as shown in Fig. 5-4-3. (In usual, it is so designed as to leave about 1mm gap.) If there is no clearance, loosen the taper nut and perform the procedure (b) at the position displaced by 1 frame.

2) Playback phase adjustment

Perform the adjustment according to the methods stated in the electrical adjustment (servo circuit).

3) Linearity adjustment

1. Play back the LP mode 3MHz video signal on the alignment tape (ST-C3).
2. Trigger the scope with the switching pulse to issue the envelope signal output.
3. Make sure the video envelope waveform (in its maximum output) meets the specification shown in Fig. 5-4-6. Again make sure the same by playing back the SP mode 3MHz video signal on the alignment tape ST-C1. If not satisfied, adjust as follows:

Note:

- a = maximum output of the video RF envelope
- b = minimum output of the video RF envelope at the entrance side
- c = minimum output of the video RF envelope at the center point of cylinder

Fig. 5-4-6 Envelope waveform adjustment

- d = minimum output of the video RF envelop at the exit side of cylinder

4. If the (A) section in Fig. 5-4-7 does not meet the specifications, adjust the S-guide roller in up or down direction.

Fig. 5-4-7 Adjustment points

5. If the (B) section in Fig. 5-4-7 does not meet the specifications, adjust T-guide roller in up or down direction.
6. After completion of the adjustment(s), press the tracking up and down buttons and make sure video envelope variations are almost flat. Next, play back the 3MHz SP mode on the alignment tape (ST-C1) and makes the video RF envelope variations are also flat when the tracking buttons are pressed.
7. If the envelope varies as shown in Fig. 5-4-8, adjustment is required again.

Fig. 5-4-8 Abnormal variation of the waveform

4) ACE head assembly fine adjustment

a. Tape wrinkle check at the lower flange of No. 8 guide

1. Check to see if any wrinkle is observed at the tape between the capstan and the OSC guide. If excessive twist is observed, adjust the OSC guide height until tape is no longer twisted and perform the adjustment 2.
2. If tape wrinkle is observed at the lower flange of No. 8 guide, adjust the ACE tilt adjusting screw counterclockwise as shown in Fig. 5-4-3 until the wrinkle disappears.
3. If a gap is observed between the lower flange of N guide and the lower edge of tape, turn the ACE tilt adjusting screw clockwise until the tape travels along the lower flange.

Note:

- This adjustment should be made using a beginning part of E-240 tape.

b. Azimuth adjustment

1. Play back the 400Hz, 7kHz audio signal on the alignment tape (ST-C1).
2. Adjust the ACE azimuth adjusting screw for maximum audio output as shown in Fig. 5-4-3.

c. Audio head height adjustment

1. Play back the alignment tape.
2. Adjust the ACE height adjusting nut for maximum audio output.

d. ACE head position adjustment

1. Play back the LP mode 3MHz envelope on the alignment tape (ST-C3).
2. Press the remote control's tracking up and down buttons simultaneously to reset to tracking center.
3. Trigger the oscilloscope with the video switching pulse and observe the video RF envelope waveform.
4. Turn the taper nut and fix the tape nut at the position where the video envelope reaches a peak level.
5. Play back the SP mode 3MHz video signal on the alignment tape (ST-C1).
6. Make sure the envelope output is maximum when the tracking is set to the center.
 - If no envelope output is obtained with the tracking center, again adjust it for maximum envelope output in SP and LP modes. (When envelope output is maximum in the LP mode at the tracking center, difference with the case in the SP mode is within 3msec.)
7. Play back the SP mode 400Hz, 7kHz audio signal on the alignment tape ST-C1 and make sure the audio output is maximum.

5) OSC guide lever adjustment

1. Set the VTR to Cue mode with E-240 tape (at beginning portion) loaded. Switch the Cue mode to the review mode when the tape has been rewound into the T-reel table to some extent.
2. Check tape wrinkle at the upper and lower flange of No. 8 guide. Adjust the OSC nut in Fig. 5-4-9 so that the tape runs without tape wrinkle.
3. Set the VTR to the Cue mode again and make sure the tape is not twisted between the capstan and the OSC guide. If twisted, adjust the OSC guide height and the adjustment in step 1 again.

Note:

- Previously modify the cassette of E-240 tape for adjusting OSC by removing the lid. First consideration should be given to adjust so that the tape cannot be twisted in the CUE mode.

Fig. 5-4-9A OSC guide lever adjustment

6) Check for transitional operation from Review to Play

1. Play back the LP mode 3MHz video signal on the alignment tape ST-C3 in Review mode and observe the video RF envelope with the oscilloscope.
2. Switch the Review mode to the Play mode. When switched to the Play mode, make sure the entrance side envelope comes to an approximate steady state within 3 sec. as shown in Fig. 5-4-10. If it does not rise within 3 sec., take the following steps starting 4.
3. Switch the Cassette Slot-In mode to the Play mode. As in item 2., if it does not rise within 3 sec., adjust as follows.

Fig. 5-4-10 Video envelope rising when operation mode is switched from review to play mode

4. Turn the No. 1 guide nut counterclockwise to adjust the lower flange height. Make sure the tape travels along the lower flange.
5. Since entrance side linearity varies as the height of the lower flange of the No. 1 guide is varied, adjust the S-guide roller to correct the linearity.
6. Check above items 2 and 3 to see that the video envelope rises within 3 sec. If not, repeat the adjustment from item 4.
7. Make sure no tape wrinkle is observed at the lower flange in the Play mode and the Review mode. If excessive tape wrinkle occurs, perform the adjustment from item 4 until the wrinkle disappears.

Note:

- If the rising characteristic is poor in Review mode, screen noise may occur in synchronous editing recording. Perform the adjustment carefully.

Fig. 5-4-9B Tape twist between Capstan and OSC guide on play & CUE mode

7) Envelope check

1. Make recordings and play back on E-180 and E-240 tapes in SP and LP modes and make sure the playback output envelope meets the specifications shown in Fig. 5-4-6.
2. In playback using the same video deck as used for the recording (with a E-180), the video envelope should meet the specification as shown in Fig. 5-4-11. (Check for both modes, SP and LP.)

Fig. 5-4-11 Envelope output and output difference

3. If the performance does not meet both specifications above 1 and 2 above, replace the upper cylinder assembly.
4. Set the video to LP mode with the E-180 tape loaded (at the beginning part) and check operation of the synchronous editing recording.
5. If picture noises are observed at the starting position of the editing, again adjust the height of No. 1 guide lower flange.

8) Tape wrinkle check

1. Playback the E-240 tape in the Play mode, CUE mode, Review mode and the frame feeding mode, and check each guide for wrinkle.
2. If excessive tape wrinkle is observed at the mode shown below, perform the associated adjustments also shown below.
 - a. Playback mode
 - Tape wrinkle at the S, T-guide rollers section
Item 3) Linearity adjustment
 - Tape wrinkle at No. 8 guide flange
Item 1) ACE head assembly coarse adjustment
 - Tape wrinkle at lower flange of No. 1 guide
Item 6) Check for transitional operations from Review to Play, and Slot-In to Play
 - b. Review mode
 - Tape wrinkle at No. 8 guide
Item 5) OSC guide lever adjustment, or
Item 1) ACE head assembly coarse adjustment
 - c. Frame advance mode
 - Tape wrinkle at No. 8 guide
Item 3) Linearity adjustment

9) Maximum AFM envelope output point check (Hi-Fi model)

1. Playback the SP mode 3MHz video signal and the 400Hz AFM signal on the alignment tape ST-C3.
2. Trigger the oscilloscope with the video switching pulse, adjust the tracking up and down buttons and check the control pulse phase at the maximum video envelope (Ach) output point.
3. Make sure the control pulse phase difference among each maximum point of AFM envelope, Ach and Bch is within $\pm 3\text{m sec.}$ with the above point used as the basic reference.

Note:

- If the phase difference exceed 3m sec., replace the upper cylinder.

2. ELECTRICAL ADJUSTMENT

<Test equipment required>

Adjustment will be performed with the following test equipment.

1. Color TV (Monitor)
2. Oscilloscope, 2 CHs, 15 MHz or higher with delay system
3. Frequency counter (7 digits or higher)
4. Millivoltmeter
5. Digital voltmeter
6. Tester (20 k ohm/V)
7. Audio generator
8. Audio attenuator
9. Alignment tapes
Part code: ST-C1: 70909227, ST-C3: 70909264
10. Alignment screw driver (jig)
11. Color pattern generator
12. Video sweep generator

<Color bar signal>

Color bar signals of 75 % recorded on the alignment tapes are shown in Fig. 2-1-1.

<Specified input and output levels, and impedance>

- Video input: Negative sync, standard composite video signal 1 Vp-p, 75 ohm
- Video output: Same as the video input 1 Vp-p, 75 ohm
- Audio input: -5 dBs, more than 10 k ohm
- Audio output: -5 dBs, less than 1 k ohm

Alignment sequence

Proceed the alignments in the sequence as shown in Fig. 2-1-2.

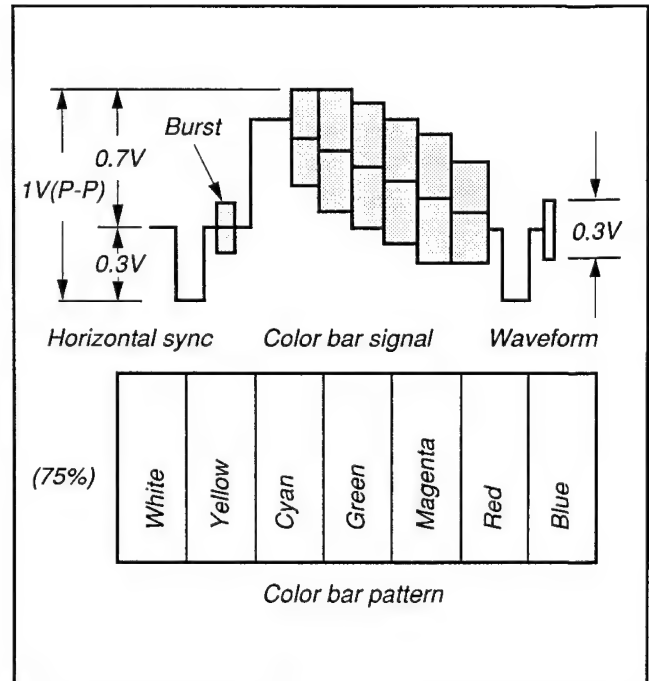

Fig. 2-1-1

Fig. 2-1-2

Alignment tape specifications

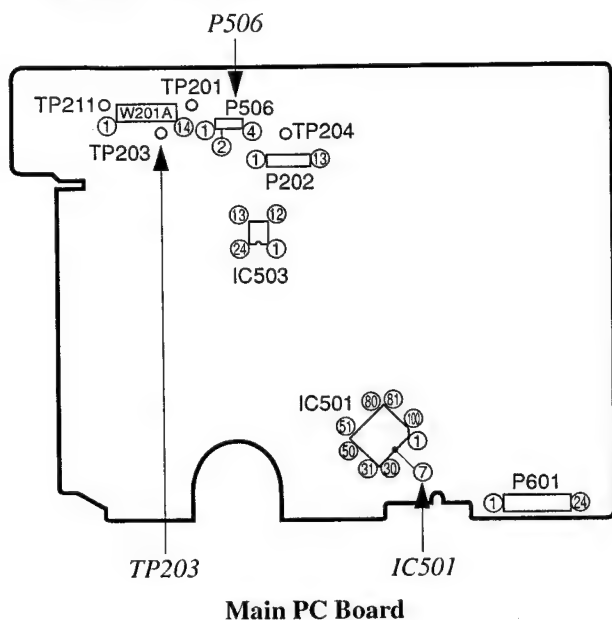

[1] ST-C1

Segment	System	Playback Time (min.)	Video Signal	Audio Signal	Applications
1	PAL & SECAM	10	Mono Scope	1 kHz	Servo checks and adjustment
2	PAL & SECAM	10	3 MHz Ach	400 Hz	Tape path checks and adjustment
3	PAL	5	Color bar	3 kHz	Video and Sound checks and adjustment
4	SECAM	5	Color bar	3 kHz	Video and Sound checks and adjustment
5	MESECAM	5	Color bar	3 kHz	Video and Sound checks
6	NTSC	5	Color bar	1 kHz	Video and Sound checks

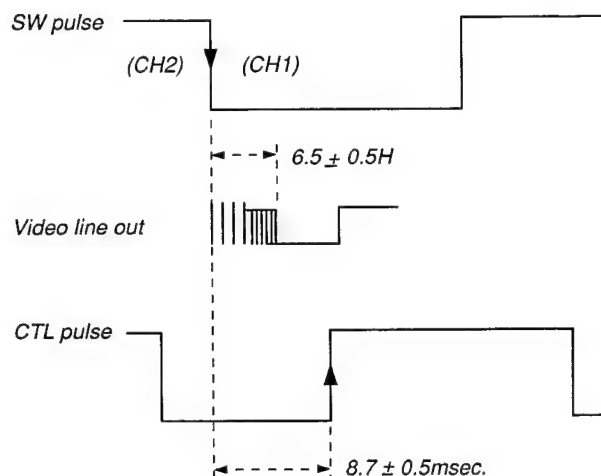

[2] ST-C3

Segment	System	Playback		Video signal	Audio signal	Applications
		Time (min.)	Mode			
1	PAL	5	LP	3 MHz Ach	400 Hz	Tape path check and adjustment
2	PAL	3	LP	Color bar	No signal	Video check and adjustment
3	PAL	3	SP	Color bar	AFM 400 Hz	Video and AFM check and adjustment
4	PAL & SECAM	5	SP	3 MHz Ach	AFM 400 Hz	AFM tracking check
5	SECAM	5	LP	3 MHz Ach	No signal	Tape path check and adjustment
6	SECAM	3	LP	Color bar	No signal	Video check and adjustment
7	SECAM	3	SP	Color bar	AFM 400 Hz	Video and AFM check and adjustment

2-1.Servo Circuit

- 2) When adjustment fails:
It goes into the STOP mode.
8. Confirm that the play indicator is displayed, and confirm that the rising and falling of the SW pulse is $6.5 \pm 0.5H$ from the V-sync front edge of the video signal.

2-1-1. Playback Phase (PG)

Test point: Pin 2 of P506, TP203 (Video out)

Test equipment: Oscilloscope

1. During playback press the unit's tracking up and down buttons simultaneously to reset the tracking to its center.
2. Under this condition confirm that phase difference between the fall of the SW pulse (pin 2 of P506) and the rise of the CTL pulse (pin 1 of P506) is $8.7 \pm 0.5 msec$.
3. Further, observe the envelope (pin 4 of P506) waveform, and confirm that the ACE head position adjustment and linearity adjustment have been made, and C-SYNC (pin 7 of IC501) is being input during playback.
4. Set the VTR to the STOP mode.
5. Press the unit's channel up and down buttons simultaneously for at least 2 sec.
6. Afterwards, within 2 sec., simultaneously press the unit's FF and REW buttons for at least 2 sec.
7. The automatic adjustment will be made for about 10 sec., all the displays will blink and any mode shift operation is not accepted for this time period. If the automatic adjustment is not carried out, confirm that the alignment tape has a safety tab or not, and redo from the step 4.
- 1) When adjustment has been completed:
The display will blink for 10 sec., stop blinking and return to the normal display in the STILL mode, then it shifts to the playback display in the playback mode.

2-1-2. Pseudo V

Test point: TV monitor

Test equipment: Tracking button

1. Make recordings and playback, and set to the STILL mode.
2. Adjust the main unit's tracking up and down buttons so that center of the still screen will stop.

2-2.Video Circuit

Main PC Board

Video Control PC Board

2-2-1. Video AGC Level

Test point: TP203, TP204
Test equipment: Oscilloscope
Adjusting point: R255

1. Feed a color bar signal (PAL) to the line input terminals and set the VTR to the EE mode.
2. Connect the oscilloscope to TP203 and trigger the scope with HD pulse at TP204. Adjust the scope so that a waveform is displayed for 2H period.
3. Adjust R255 until amplitude of $2.0 \pm 0.10V_{p-p}$ is obtained between sync tip and 100% white level.

2-2-2. Sync Tip Frequency

Test point: TP202
Test equipment: Frequency counter
Adjusting point: R251

1. Short circuit the line input terminals with a phone jack and set the VTR to the REC mode.
2. Connect the frequency counter to TP202.
3. Adjust R251 to obtain frequency reading of 3.8 ± 0.07 MHz.

2-2-3. FM Deviation

Test point: R206 (R251 side), TP203, TP204
Test equipment: Oscilloscope
Adjusting point: R252, R256

1. Feed the color bar signal (PAL) to the line input terminal.
2. Connect the oscilloscope to R206 (R251 side) and trigger the scope with a HD pulse at TP204. Adjust the scope so that a waveform is displayed for approx. 2H period.
3. Adjust R252 to obtain the amplitude of approx. $0.20V_{p-p}$ between the sync tip and the white peak. After adjusting R256 (Playback Y signal output level) with the method 2-2-6, repeat above adjustment procedures, and then adjust R252 (FM deviation control) so that the playback Y signal output level at TP203 shows $2.0 \pm 0.15V_{p-p}$.

Horizontal axis: $10\mu s/div.$
 Vertical axis: $0.1V/div.$

Main PC Board

Video Control PC Board

Pre Amp PC Board

2-2-4. REC FM Level

Test point: TPV01, TPV02 GND (PV03)

Test equipment: Oscilloscope

Adjusting point: RV51

1. Connect the plug into the line input terminal and set the mode to the REC (LP) under no signal condition.
2. Connect the oscilloscope to TPV01.
3. Adjust RV51 so that FM amplitude level shows $0.40 \pm 0.02V_{p-p}$.

2-2-5. REC Color Level

Test point: TP204, TP208

Test equipment: Oscilloscope

Adjusting point: R451

1. Feed the PAL color bar signal to the line input terminals and set the VTR to the REC(SP) mode.
2. Connect the oscilloscope to TP208 and trigger the scope with HD pulse at TP204. Adjust the scope so that a waveform is displayed for approx. 2H period.
3. Adjust R451 so that amplitude of the red portion shows $0.16 \pm 0.02V_{p-p}$.

2-2-6. Playback Y Signal Output Level

Test point: TP203, TP204

Test equipment: Oscilloscope

Adjusting point: R256

1. Play back the alignment tape, ST-C1 (PAL color bar signal).
2. Connect the oscilloscope to TP203 and trigger the scope with HD pulse at TP204. Adjust the scope so that a waveform is displayed for approx. 2H period.
3. Adjust R256 so that amplitude of $2.0 \pm 0.15V_{p-p}$ is obtained between the sync tip and the 100% white level.

Main PC Board

Video Control PC Board

2-2-8. 4.43 MHz XO Frequency

Test point: TP211

Test equipment: Frequency counter

Adjusting point: C451

1. Play back the alignment tape, ST-C1 (PAL color bar signal).
2. Connect a frequency counter to TP211 and set the measurement range to a position which gives reading accuracy of 1 Hz.
3. Adjust C451 trimmer until the frequency reading of 4.433619 MHz \pm 50 Hz is obtained.

2-2-7. Y Comb-filter Balance

Test point: TP204, TP213

Test equipment: Oscilloscope

Adjusting point: R257

1. Play back the alignment tape, ST-C1 (PAL color bar signal).
2. Unsolder the slit beside TP213.
3. Connect the oscilloscope to TP213, and trigger the scope with HD pulse at TP204.
Adjust the scope so that a waveform is displayed for approx. 2H period.
4. Adjust R257 so that amplitude on the scope display shows minimum. (Ignore glitches.)
5. Solder the slit.

2-3.Audio Circuit

Note:

Unless otherwise specified, set as follows:

- Input select
(set the INPUT SELECT "L1") LINE 1
- Audio select switch. Conventional
(Both L, R indicators should be turned off.)
- External terminal Audio terminal (AV 21 pin)
(Lch and Rch)
- Connect 10 k ohm load to audio output terminal.
(AV 21 pin)
- Adjustments for the playback frequency response and playback output level may not be performed if the audio control head is improperly positioned on the audio track. In such a case, perform the azimuth adjustment and height adjustment perfectly, and then proceed with the adjustments 2-3-1 to 2-3-3.

Relay PC Board

2-3-1. Playback Output Level (Confirmation)

Test point: Audio line output terminal (AV 21 pin)

Test equipment: Millivoltmeter

1. Connect 10 k ohm to the audio line output terminal and playback the alignment tape (ST-C1).
2. Confirm that the output level is -5 ± 2 dBs.

2-3-2. Bias Current

Test point: Pins 1 and 2 of P705

Test equipment: Millivoltmeter

Adjusting point: R752

1. Short circuit the audio line input terminal, creating no input signal condition. Connect a millivoltmeter to pins 1 and 2 (GND) of P705.
2. Set the VTR to the record mode and adjust R752 to obtain 2.9mVrms.

Note:

If the adjusted value is too high, treble tone tends to decrease. If the value is too low, distortion tends to increase.

2-3-3. Record/Playback Output Level

Test point: Audio line output terminal
(AV 21 pin)

Test equipment: Millivoltmeter

1. Connect a 10 k ohm resistor to the audio line output.
2. Feed 400 Hz, -5.0 dBs signal to the audio line input terminal and record the signal.
3. Confirm to see the playback output level is -5 ± 3 dBs.

Note:

When recording audio signals, record a video signal no signal at the same time.

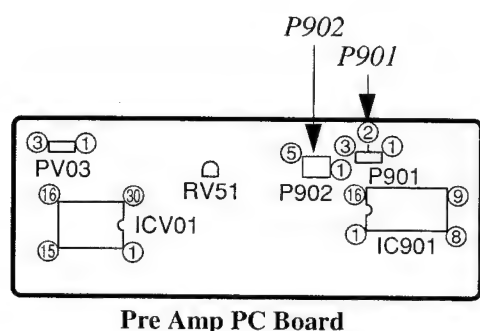

4. If the level is less than -5 ± 3 dBs, short-circuit a slit in the Hi-Fi Audio PC Board.

2-4. Hi-Fi Audio Circuit

Note:

Unless otherwise specified, set as follows:

- Input select
(set the INPUT SELECT "L1") LINE 1
- Audio select switch..... Stereo
(Both L, R indicators should be turned on.)
- External terminal
..... Audio terminal (AV 21 pin)
(Lch and Rch)
- Connect 10 k ohm load to audio output terminal.
(AV 21 pin)

2-4-1. Carrier Frequency

Test point: TPK1, TPM1

Test equipment: Frequency counter
(Input impedance; more than 1 MΩ.)

Adjusting point: RK54, RM54

1. Disconnect FFC W901 of P902 on Pre Amp PC board.
2. Connect TP93 and TP94.
3. Connect frequency counter to TPK1 and TPM1. The amplitudes at these test points are low, so they should be amplified by amplifiers in oscilloscope, etc. and then input amplified outputs to the frequency counter.
4. Adjust RM54 for 1400 ± 3.5 kHz at TPM1 and RK54 for 1800 ± 3.5 kHz at TPK1.
5. After adjustment is completed, remove the connections between TP93 and TP94.
6. Connect W901 to P902 on Pre Amp PC Board.

2-4-2. Record Level

Test point: Pin 2 of P901 (Pre Amp PC Board)

Test equipment: Oscilloscope

Adjusting point: R952

1. Adjust R952 to obtain record FM waveform of E.
($E = 0.4 \pm 0.02$ Vp-p.)
2. The adjustment should be performed 15 sec. after starting of the record.

Record FM waveform

2-5. OSP Circuit

2-5-1. Character Position Adjustment

Test point: _____

Test equipment: TV monitor

Adjusting point: CE51

1. Feed color bar signal to the line input terminal
2. Set the VTR to the OSP mode.
3. Adjust CE51 so that character position is in the middle of the display.

SECTION 3

How to use the table

1. When inspecting a defective VTR, proceed according to the steps shown in the table.
2. Check the items to be confirmed for each operation step.
3. If a problem is found on the item, check waveforms (level) referring to the block diagram relating to the items.
4. Use PC board pattern diagram and schematic diagram to examine the circuit precisely.
5. After completion of the repair work, check steps 1 – 7 again.

2. Removal of Cabinet

1. Disconnect the power cord plug from the AC outlet.
2. Remove four screws ② and a screw ③ securing the top cover ①.
3. Slide the top cover ① backward to remove.
4. Remove two screws ⑧ securing the insulators ⑨.
5. Remove five screws ⑤ securing the bottom cover ④, and then remove the bottom cover ④.
6. Remove the two screws ⑦ securing the front panel ⑥.
7. Remove the front panel ⑥.

PRECAUTIONS FOR PART REPLACEMENT

- In the schematic diagram, parts marked \triangle (ex. \triangle F801) are critical part to meet the safety regulations, so always use the parts bearing specified part codes (SN) when replacing them.
- Using the parts other than those specified shall violate the regulations, and may cause troubles such as operation failures, fire, etc.

SOLID RESISTOR INDICATION

Resistor	1/6W film	P type film	U type film	Solid	Oxide film	Metal film	Cement	Fuse
Symbol	None	P	U	S	R	W	W	RF

Tolerance	$\pm 2\%$	$\pm 5\%$	$\pm 10\%$	$\pm 20\%$
Symbol	G	J	None	None

- All film type and oxide film resistors are $\pm 5\%$, so the tolerance symbol was not indicated for them.

CAPACITANCE INDICATION

Description	Symbol	Capacitance, unit	Capacitance allowance
Electrolytic	$\begin{array}{c} \pm \\ \text{---} \text{---} \end{array}$	μF	Not indicated
Special electrolytic			Indicated
Plastic film	$\text{---} \text{---}$	μF :indicated with numbers below decimal point	Indicated below $\pm 5\%$ (J), indicated below $\pm 0.5\text{pF}$, not indicated for others
Ceramic		pF :indicated with numbers over decimal point	
Trimmer	$\text{---} \diagup \text{---}$	pF	Not indicated

Note: No working voltage is indicated for capacitors rated at 50V except electrolytic capacitors.

WAVEFORM AND VOLTAGE MEASUREMENT

- Measurement of waveform and voltage at each section in the color circuits was conducted with sufficient service color bar signal being received and reproduced in normal conditions.
- Waveforms and voltage values for the remaining circuit were measured with a broadcasting signal normally received, so they may vary slightly according to the programs being received. Use them as a measure for servicing.
- All voltage values except the waveforms are expressed in DC and measured by a digital voltmeter.

CHIP PART REPLACEMENT

(Use spare part with wire leads connected.)

1. Hold a Chip part to be removed with tweezers and apply heat to the solder at one end of the part with a soldering iron. (Fig. 1)
2. Apply heat to the solder at the other end of the part and remove it.
The heating time should be as short as possible so the excessive heat is not applied to foil patterns and the PC Board.
3. If it is difficult to remove the part, temporarily stop the desoldering job and wait until temperature of the part lowers. Then, repeat steps 1 and 2.
4. Form leads of the replacement part (general part equivalent to the chip part) as shown in the figures and solder place. (Fig. 2)
5. Mount the replacement part so that it does not touch any other parts. (Fig. 3)

Fig. 1

Fig. 2

Fig. 3

REPLACING SUBMINIATURE "CHIP" PARTS

1) Required tools:

1. Fine tipped, well insulated soldering "pencil," about 300 Watts.
2. Tweezers
3. Blower type hair dryer.

2) Soldering cautions:

1. Do not apply heat for more than 3 seconds.
2. Avoid using a rubbing stroke when soldering.
3. Discard removed chips; do not reuse them.
4. Supplementary cementing is not required.
5. Use care not to scratch or otherwise damage the chips.

3) Removal (resistors, capacitors, etc.):

1. Melt the solder at one side.

Fig. 1

2. Grasp the part with tweezers and melt the solder at the other side.

Fig. 2

3. Remove the part with a twisting motion.

Fig. 3

4) Removal (transistors, diodes, etc.):

1. Melt the solder of one lead.

Fig. 4

2. Lift the side of that lead upward.

Fig. 5

3. Simultaneously heat solder the two remaining leads and lift part to remove.

Fig. 6

5) Preheating (except for semiconductors):

Immediately before installing new resistors or capacitors, use a blower type hair dryer and preheat the part for about two minutes at approximately 150°C.

6) Replacement:

1. Presolder the contact points of the circuit pattern.

Fig. 7

2. Press the part downward with tweezers and apply the soldering pencil as indicated in the figure.

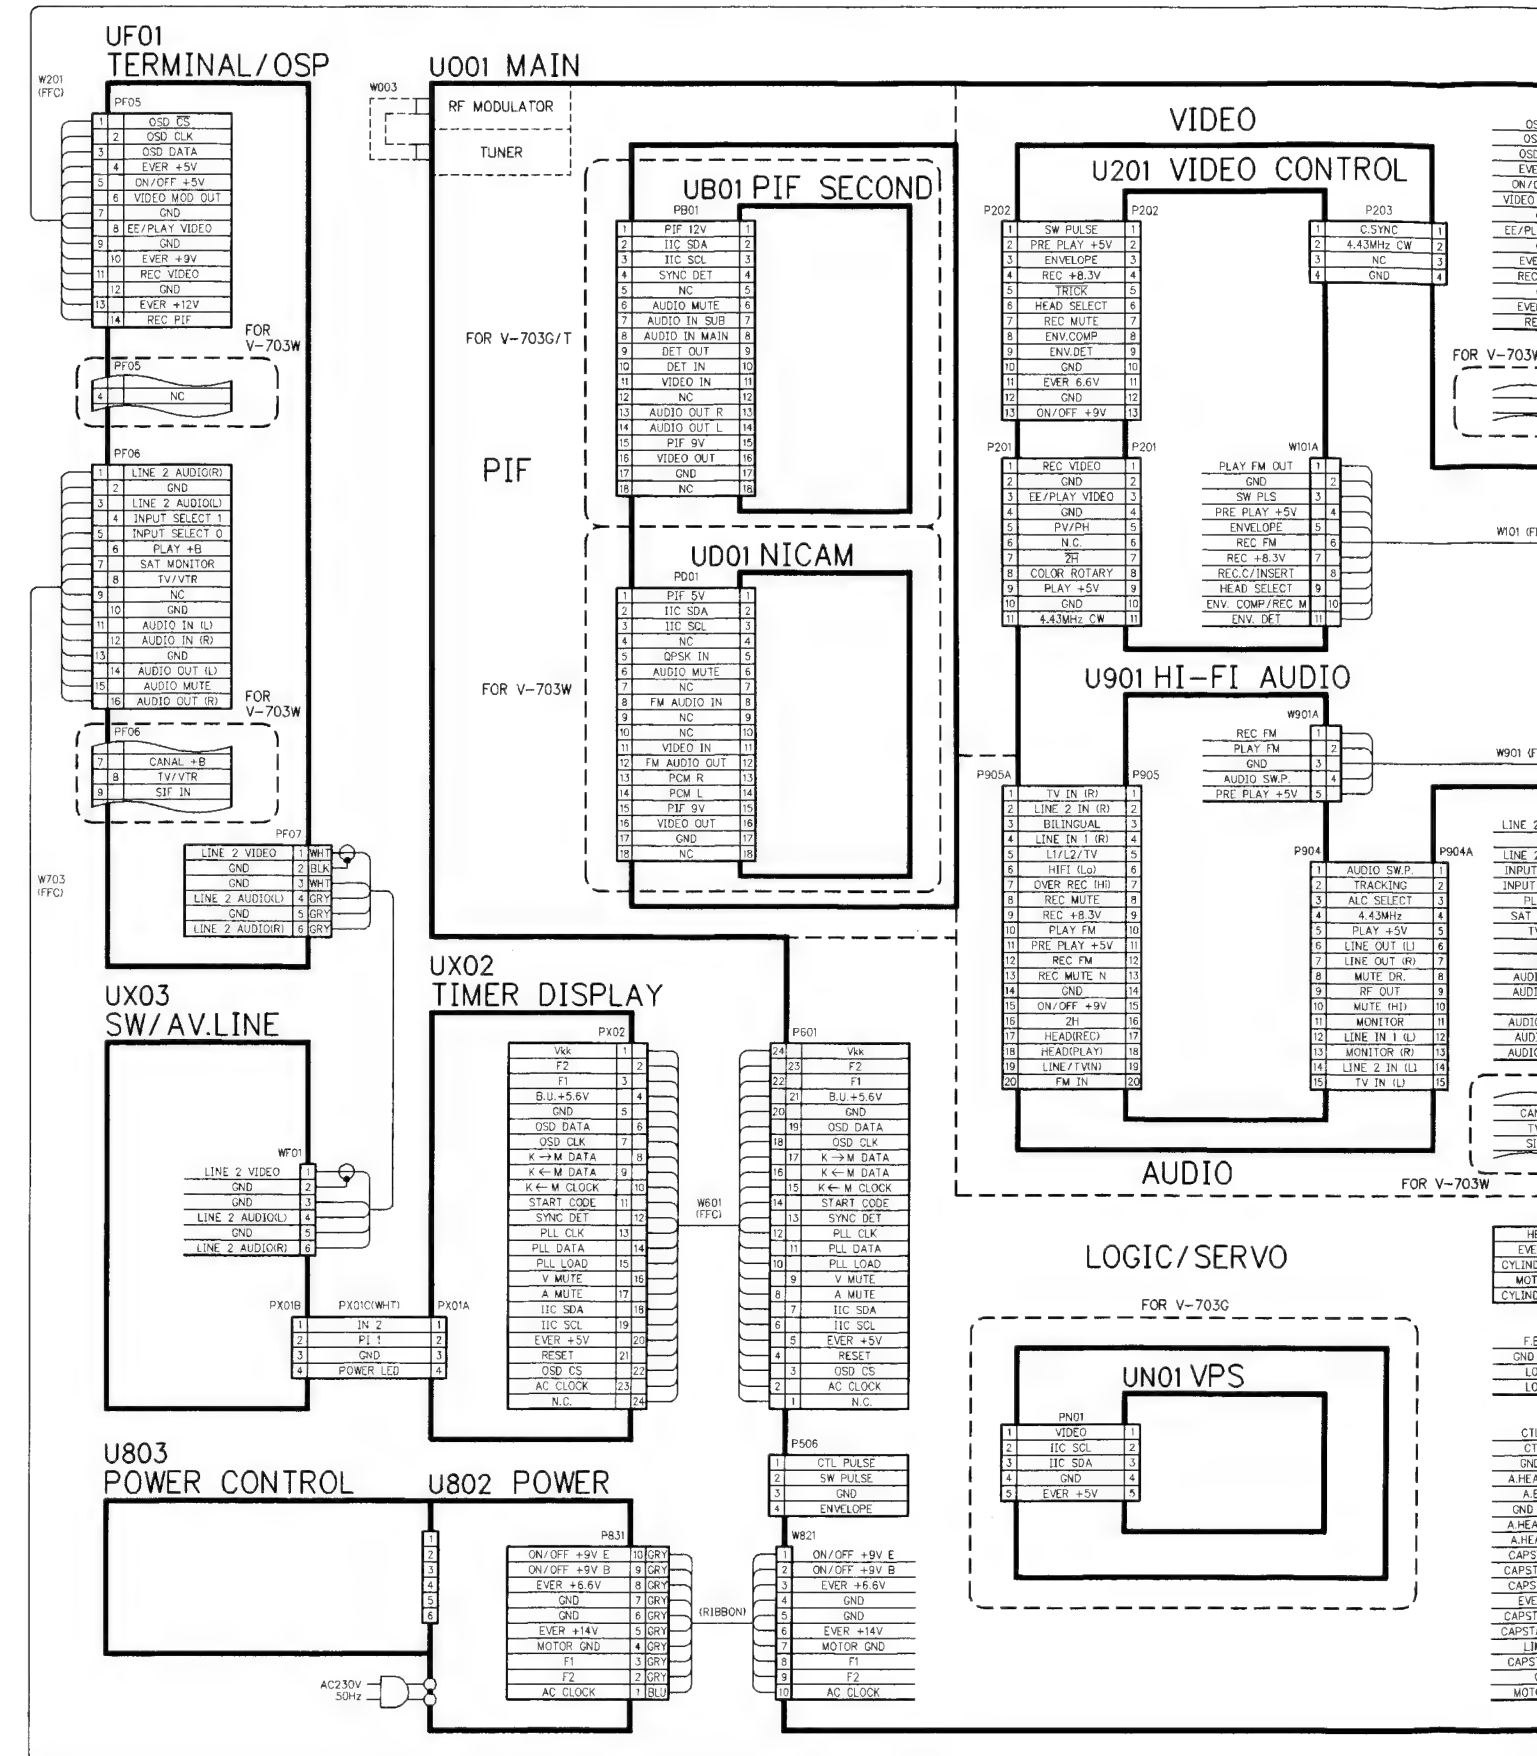

Fig. 8

This isometric view shows the 3D printed part from a perspective that highlights its internal structure. The part has a rectangular base with a central circular hole. The internal features, including the vertical support walls and the horizontal base, are clearly visible, demonstrating the transparency of the printed material.

SECTION 4 PARTS LIST

SAFETY PRECAUTION

The parts identified by \triangle mark are critical for safety. Replace only with part number specified.

The mounting position of replacement is to be identical with originals. The substitute replacement parts which do not have the same safety characteristics as specified in the parts list may create shock, fire or other hazards.

NOTICE

The part number must be used when ordering parts in order to assist in processing, be sure to include the model number and description.

Parts marked # are of chip type and mounted on original PC boards.

However, when they are placed for servicing works, use discrete parts listed on the parts list.

This parts list is based on the model V-703G. For V-703T and V-703W different parts only are listed on the difference list.
